1. INTRODUCTION

1.1 Scope and Purpose

SA Power Networks June 2017 Pricing Proposal has established five standard control services tariff classes into which the tariffs that its customers for direct control services have been separated:

- Major Business
- High Voltage Business
- Large Low Voltage Business
- Small Low Voltage Business
- Residential (including Controlled Load)

SA Power Networks is required to assign a Network tariff to each of a customer's connection points, on the basis of a number of factors set out in the National Electricity Rules (the Rules) and procedures established by the AER. SA Power Networks is also permitted to reassign a customer's tariff class, if appropriate. This assignment and reassignment of customers to tariff classes is required by the National Electricity Rules to be subject to an effective system of assessment and review.

1.2 Rates and Fees Application

The distribution use of system (DUoS) tariffs and alternative control service (ACS) charges will apply from 1 July 2017.

1.3 Terms and Definitions

Note: Specific metering terminology is located in the metering section of the document.

Term	Definition
AEMO	Australian Energy Market Operator. Incorporates the functions of NEMMCO (National Electricity Market Management Company).
AER	Australian Energy Regulator.
Agreed Additional Demand	Is the amount that the Agreed Anytime Demand exceeds the Agreed Annual Demand. If the Agreed Anytime Demand is less than Agreed Annual Demand then the Agreed Additional Demand is zero.
Agreed Annual Demand	Is the highest demand expected to be required in the period 12:00 to 21:00 on working days in November through March (Central Standard Summer Time). This may be determined by agreement or by recorded demand.
Agreed Anytime Demand	Is the highest demand expected to be required outside of the times that the Agreed Annual Demand applies. This may be determined by agreement or by recorded demand. This may be equal or higher than the Agreed Annual Demand but not less.
Alternative Control Services	These services are customer specific or customer requested services. These services may also have the potential for provision on a competitive basis rather than by a single distributor
Augmentation	Means works to enlarge the capability of the SA Power Networks distribution network to distribute electricity.

Term	Definition
Authorised Capacity	<p>Is the supply capacity that the customer is authorised to use. This is generally the demand capacity specified in SA Power Networks offer letter up to the first three years from connection.</p> <p>The capacity then becomes the agreed demand and could be less than what was agreed to in the offer letter.</p> <p>Where a customer requests a reduction in their Agreed Demands then subject to approval the reduced Agreed Demands also becomes the Authorised Capacity.</p>
Basic Connection Service	<p>Means a connection service related to a connection (or proposed connection) no greater than 100 Amps per phase low voltage between SA Power Networks distribution system and a customer's premises (including a small embedded generator no more than 10kVA per phase and a total of 5kVA SWER connections).</p> <p>The provision of this connection service involves minimal or no augmentation of the distribution network.</p>
Connection	<p>Means a physical link between SA Power Networks distribution system and a customer's premises to allow the flow of electricity.</p>
Connection Point	<p>The physical location of connection between a customer's electrical installation and SA Power Networks distribution system assets.</p>
Customer	<p>Distribution Network User.</p>
DLF	<p>Distribution Loss Factor – measure of the percentage of energy lost through line losses on the distribution network between the transmission connection point and the customer connection point.</p>
Entry Point	<p>The physical point at which SA Power Networks distribution system (feeder) or the customer's consumer's mains cross the property boundary operated or owned by the customer and where the energy flow is from the outside to the inside of the property.</p>
Excess kVAr charge	<p>If a customer installation is not power factor compliant at times of the NMI monthly peak demand, then an annual charge is applied. The charge equates to the amount of kVAr's required to make the site compliant times a fixed charge.</p>
Exit Point	<p>The physical point at which SA Power Networks distribution system (feeder) crosses the customer's property boundary operated or occupied by the customer and where the energy flow is from the inside to the outside of the property.</p>
Expedited Connection	<p>A basic connection service can be expedited by accepting both the Terms and Conditions of the MSO and the default price when the application is made.</p>
Extension	<p>This term applies to extending the distribution network into areas not previously supplied at that voltage. The extension is likely to be used by more customers than those initially being supplied. This includes building new HV mains above existing LV mains, new radial extensions of HV mains, LV mains and SWER lines and may include new transformers.</p>

Term	Definition
FRMP	Financially Responsible Market Participant ie the Retailer.
Indicative Price List	A set of default connection service charges that indicates the average price for the provision of each service. These charges do not apply if you choose a negotiated service.
kVA	kVA essentially represents demand. kVA includes both Active and Reactive power to give a better indication of the demand on an electrical supply system. (Apparent Power).
kW	Watts are the electrical unit of power, 1kW = 1,000 Watts – A measure of demand however this unit only includes the electrical properties that actually perform electrical work (Also known as Active or Real power).
kWh	The unit used for electrical energy consumed eg 1kW of load used for 1 hour equals 1kWh.
kVAr	The unit used for the measurement of reactive power.
LNSP	Local Network Service Provider – For customers directly connected to SA Power Networks distribution system the LNSP is SA Power Networks.
MDP	Metering Data Provider – the organisation responsible for collecting and ‘publishing’ meter readings or consumption data.
MLF	Marginal Loss Factor – a measure of the percentage of energy lost through line losses in the Transmission system compared to that lost in supplying the Reference Node.
Model Standing Offers (MSO)	Provides the Terms and Conditions of a basic connection service which have been approved by the AER.
Monthly Off-peak Demand	This is the peak demand reached in the periods outside of the Monthly Shoulder Demand and the Monthly Peak Demand periods.
Monthly Peak Demand	This is the peak demand reached on a week day in the months of November, December, January, February and March in the peak demand period 4pm to 9pm. This demand is reset each month and public holidays are excluded.
Monthly Shoulder Demand	This is the peak demand reached on a week day each month in the shoulder demand period 12 mid day to 4pm. This demand is reset each month.
MPB	Meter Provider – the organisation responsible for providing and/or maintaining the metering installation under the NER.
Negotiated Services	All services that are not a basic connection service.
Negotiated Connection Services	Are all services that relate to a connection (or a proposed connection) between SA Power Networks distribution system and the customers premises but are not basic connection services.

Term	Definition
Negotiated Distribution Services	Are all services that are not related to a connection (or a proposed connection) between SA Power Networks distribution system and the customer's premises.
NER	National Electricity Rules – formerly called NEC.
NMI	National Metering Identifier.
	A unique number for a customer's metered connection point or points. A customer may have more than one metered connection point; therefore, a customer could have more than one NMI. A NMI is 10 characters long with an additional check digit eg SAAAAAXXXX / X or 200XXXXXXXX / X
Off-peak Energy	Energy consumed that is other than peak energy.
Peak Energy	Energy consumed on business days between the hours of 0700 and 2100 (Central Standard Time). For customers with metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 (Central Standard Time).
PF	Power Factor is essentially a type of efficiency measure and is the ratio of Active and Apparent power. ie PF = kW/kVA.
PV	Photovoltaic.
PV JSO	This is a charge to recover the SA Government solar feed in subsidy provided to customers that qualify for the solar feed in tariff.
Real Estate Development	Means the commercial development of land including its development in one or more of the following ways: <ul style="list-style-type: none"> • Residential, industrial or commercial subdivision; • The construction of multi tenanted commercial or industrial premises (or both); • The construction of multiple new residential premises ie multi tenanted apartment building.
RP	Responsible Person – the organisation responsible for managing a metering installation under the NER.
Standard Control Services	Those distribution services that are central to electricity supply and include network augmentations and, in limited circumstances, network extensions. These services encompass construction, maintenance and repair of the network for existing and new customers.
Sub-Transmission	Is the SA Power Networks 33kV backbone and 66kV network.
Sub-Transmission Tariff	To be eligible for a Sub-Transmission Tariff the customer must take direct supply from the SA Power Networks Sub-Transmission network.
SWER	Single Wire Earth Return.

Term	Definition
Termination Point	The physical point at which SA Power Networks distribution system (feeder) terminates within the customer's property boundary.
URD	Underground Residential Development.
Zone Substation	A Zone Substation is an SA Power Networks premise in which HV supply is converted, controlled or transferred.
Zone Substation Tariff	To be eligible for a Zone Substation Tariff the customer must take direct supply from an SA Power Networks Zone Substation and have a minimum demand of 5,000kVA. The supply is taken from the secondary side of the transformer located at the substation.

1.4 Referenced Documents, Codes and Regulations

The following documents have been referenced in this Network Tariff & Negotiated Services manual:

- The South Australian Electricity Distribution Code ¹
- South Australian Electricity Metering Code ²
- National Electricity Rules ³
- AER Final Decision for South Australia ⁴
- SA Power Networks Pricing Proposal ⁵

2. REQUIREMENTS OF THE NATIONAL ELECTRICITY RULES AND THE AER'S FINAL DETERMINATION 2015-16 TO 2019-20

SA Power Networks 2017/18 Pricing Proposal was prepared in accordance with Clause 6.18.2 of the Rules⁶. The Pricing Proposal defines the five tariff classes into which customers of its standard control services are separated.

Pursuant to the principles set out in clause 6.18.4 of the Rules, the AER agreed to assign all existing SA Power Networks customers to these five tariff classes in 2015-20.

Appendix B of the AERs Final Decision set out the procedures which SA Power Networks must follow in assigning customers to tariff classes or reassigning customers from one tariff class to another during the 2015-20 regulatory control period. The procedures also cover the following matters pertaining to tariff class assignment and reassignment:

- Assignment of new customers to a tariff class
- Reassignment of existing customers to another existing or a new tariff class
- Objections to proposed assignments and reassessments

1 Available at: <http://www.aer.gov.au/node/11641>

2 Available at: <http://www.escosa.sa.gov.au/library/101221-ElectricityMeteringCode EMTC07.pdf>

3 National Electricity Rules Version 80, 26 May 2016

4 Australian Energy Regulator, Final decision – SA Power Networks determination 2015-16 to 2019-20

5 SA Power Networks Pricing Proposal 2016/17, 31 May 2016

6 National Electricity Rules 6.18.2(a)(2) Ver 65. Note: the former rules apply (Ver 65) for year 2 of the regulatory control period on account of transitional Rule 11.73.1(b) Ver 80.

3. TARIFF CLASS ASSIGNMENT PROCEDURES

This section sets out the tariff and tariff class assignment procedures to be followed by SA Power Networks in the 2017/18 regulatory year.

3.1 Tariffs and Tariff Classes

SA Power Networks' regulated services are classified in accordance with the Rules as direct control services and include its network services and some metering services. These services have been further classified into:

- Standard control services (network services); and
- Alternative control services (metering services).

Each of these classifications of service is subject to separate regulatory determinations by the AER.

SA Power Networks' standard control services tariffs have been grouped into five tariff classes. This grouping is illustrated below.

SA Power Networks standard control services tariff classes

Type 1-4 meter	Type 5-6 meter	Type 5-6 meter	Type 7 (unmetered)
Monthly billing	Monthly billing	Quarterly billing	Monthly billing
Major Business (11, 33, 66 kV) kVA demand (locational TUoS) STN kVA demand (locational TUoS) ZSN kVA demand Zone ZSN			
HV business kVA demand HV kVA demand HV HV400 (<400kVA) kVA Actual demand HBD			
Large business kVA demand LV kVA Actual demand BD kVA transitional actual demand BDT			
Small business kVA Actual demand SBD kVA transitional Actual demand SBDT Energy only 2 rate SB2R124 Energy only SBSR124	kVA Actual demand SBD kVA transitional Actual demand SBDT Energy only 2 rate SB2R124 Energy only SBSR124	Energy only 2 rate SB2R124 Energy only SBSR124	LVUU LVUU24
LV Residential KW monthly single rate MRSR With Controlled load MRSROPCL KW monthly actual demand	MRSR With Controlled load MRSROPCL	QCSR With Controlled load QRSROPCL	

SA Power Networks' alternative control services tariffs have all been grouped into a single tariff class. This arrangement is illustrated below.

SA Power Networks alternative control services tariff classes

Alternative Control Services Tariffs

- Type 1-4 Exceptional remotely read
- Type 5-6 CT connected, manually read
- Type 5-6 WC manually read

3.2 Assignment of new customers to a tariff class

Upon receipt of an Application the provision of a new or altered network connection the SA Power Networks Project Officer responsible for managing the Application for Connection will determine the tariff and tariff class to be applied to the new or upgraded customer connection.

The tariff and tariff class to be assigned, or reassigned, to a customer will be chosen by the Project Officer in accordance with the requirements set out in Sections 4 and 5 of this *Network Tariff & Negotiated Services* manual. This tariff and tariff class assignment takes into account one or more of the following factors⁷:

Customers with similar connection and usage profiles are treated equally; and

Customers that have micro-generation facilities are not treated less favourably than customers with similar load profiles without such facilities.

Customer notification of tariff class assignment

The Project Officer is responsible for notifying the customer who lodged the Application to Connect, of the proposed network tariff and tariff class assignment. These details are to be provided together with SA Power Networks connection offer to the customer.

The connection offer will include the additional information set out in Section 3.4.

3.3 Reassignment of existing customers to another existing or a new tariff class during the next regulatory control period.

SA Power Networks Major Customer Manager is required to carry out a bi-annual review of the consumption of customer. This review is intended to identify whether:

- An existing customer's load or connection characteristics have changed, such that it is no longer appropriate for that customer to be assigned to the current tariff class; or
- A customer no longer has the same or materially similar load or connection characteristics as other customers on the customer's existing tariff class.

In the event that this review identifies customers whose tariff class is no longer appropriate, then SA Power Networks Major Customer Manager may propose to reassign that customer to another tariff class.

⁷ In the event that a future regulatory obligation requires remotely-read interval metering or other similar metering technology to be installed at the customer's premises, this procedure may be modified.

Customer notification of tariff class reassignment

The Major Customer Manager is responsible for using best endeavours in notifying any customers in writing of the proposed reassignment of their network tariff. If the identity of the customer is not known, then the customer's retailer is to be notified instead.

The tariff reassignment advice will include the additional information set out in Section 3.4.

One month's notice is to be provided to the customer or retailer of a proposed tariff class reassignment unless the change advantages the customer then it will be made as soon as possible.

3.4 Objections to proposed tariff class assignments and reassessments

Information provided to customers concerning tariff class assignment and reassignment

Where SA Power Networks notifies customers of a tariff class assignment or reassignment, the notification will include reference to the web address from which this *Network Tariff & Negotiated Services Manual* may be obtained. The notification will also explain that:

- The customer may request further information from SA Power Networks' Manager Regulation;
- The customer may object in writing to SA Power Networks' Manager Regulation concerning the proposed tariff or tariff class assignment;
- In the event that the customer is not satisfied with SA Power Networks' internal resolution of such an objection, the customer may be entitled to appeal to the Energy Industry Ombudsman (South Australia). Typically, small customers (<160 MWh) have access to the Ombudsman; and
- In the event that an objection is not resolved to the satisfaction of the customer under SA Power Networks' internal review system, then the customer is entitled to seek resolution via the dispute resolution process available under Part 10 of the NEL.

Upon receipt of a request for further information concerning a tariff class assignment or reassignment, SA Power Networks' Manager Regulation is to arrange the provision of relevant information to the customer concerning the tariff class assignment or reassignment, provided that such information is not confidential.

Internal review process of tariff class assignment and reassignment

Upon receipt of an objection by a customer to a tariff class assignment or reassignment, SA Power Networks' Manager Regulation will reconsider the relevant tariff class assignment or reassignment, having regard to the following:

- The basis of the customer's objection;
- The principles for tariff assignment and reassignment set out in clauses 6.18.3 and 6.18.4 of the Rules;
- The procedures for tariff assignment and reassignment set out in Attachment 14, of the AER's Final Determination; and
- The process and guidelines for tariff assignment and reassignment set out in Sections 3 and 4 of this *Network Tariff & Negotiated Services Manual*.

The SA Power Networks' Manager Regulation will notify the customer of the outcome of SA Power Networks' internal review and the reasons for accepting or rejecting the customer's objection to the tariff class assignment or reassignment. The notification by the Manager Regulation will also advise that:

- In the event that the customer is not satisfied with SA Power Networks' internal resolution of such an objection, the customer may be entitled to appeal to the Energy Industry Ombudsman (South Australia); and

- In the event that an objection is not resolved to the satisfaction of the customer under the SA Power Networks internal review system, then the customer is entitled to seek resolution via the dispute resolution process available under Part 10 of the NEL.

External review of tariff class assignment and reassignment

If a customer's objection to a tariff class assignment or reassignment is upheld by a relevant external dispute resolution body, then any adjustment which needs to be made to prices will be done by SA Power Networks as part of the next annual review of prices.

4. TARIFFS

4.1 General

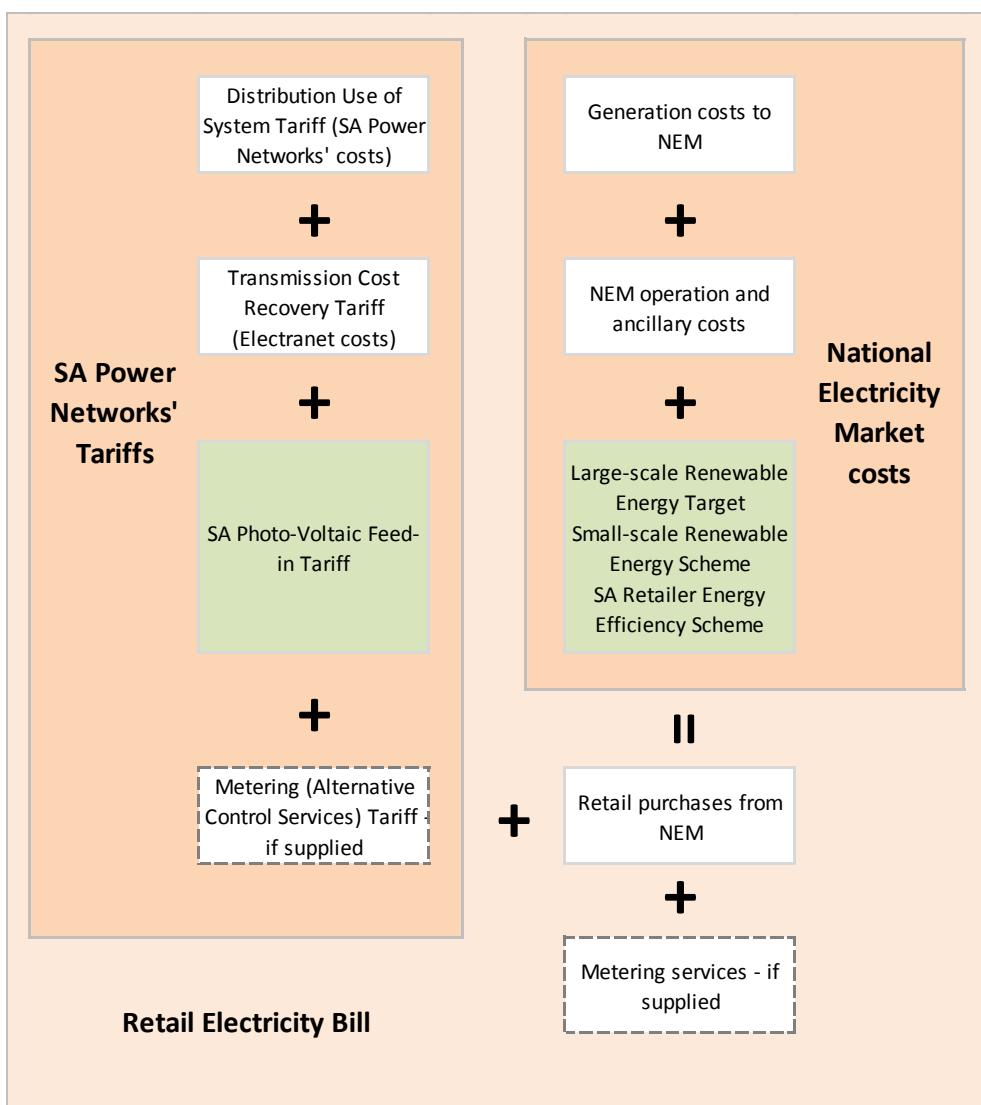

A customer's retail electricity bill will generally comprise the following components, although particularly for smaller customers, these components may not be separately itemised:

- Retail charges;
- NEM charges;
- Network charges; and
- Metering charges.

Retail charges cover the cost of a retailer buying energy from the national pool or directly from a generator and selling it to the customer. The retail charge is the component that a customer negotiates a pricing plan for when entering into a market contract.

The components of a customer's retail electricity bill are shown in the following illustration. With regard to metering services, certain components of the metering service may be provided by SA Power Networks, may be supplied by the retailer or may be procured directly by the customer.

Components of a retail electricity bill

Network Tariffs are set in accordance with the requirements of:

- The Electricity Act
- The NER
- The AER's Determination

SA Power Networks is required to assign a network tariff and tariff class to each customer using the procedure set out in Attachment 14 of the AER's determination. In practical terms, the following factors determine the nature and extent of the customer's usage and the nature of the customer's network connection:

- Type of use (ie residential or business);
- The connection point characteristics (eg low or high voltage); and
- The maximum electrical demand.

Network tariffs include components for:

- Distribution (DUoS – Distribution Use of System)
- Transmission (TUoS – Transmission Use of System)
- PV FiT (photo-voltaic feed-in tariff recovery); and may also include
- Metering Services.

In some cases, a network tariff is required to be assigned and in other cases the customer or retailer can elect a tariff subject to meeting eligibility criteria.

4.2 Categories

Tariffs are assigned subject to the requirements specified in the ‘Notes accompanying the Distribution Tariffs’ as issued from time to time. Customers must advise SA Power Networks of their particular circumstances in order for the correct tariff(s) to be assigned (Distribution Code). For situations not specifically covered, the following general principles apply.

4.2.1 Residential Use

Residential use is electricity consumed by a Customer at a domestic dwelling and who lives in that dwelling. This may include consumption from an office located within the home so long as there is no more than one employee normally working within the dwelling. Note: For the purposes of this definition hired domestic help or carers are not to be considered employees.

Residential use can also include:

- Electricity used in outbuildings etc located on the same property as the Customer’s dwelling and where the primary use of the outbuilding is domestic;
- Short term accommodation provided due to the nature and location of the property eg shearing quarters (accommodation provided as term of employment); and
- Electricity used in the pumping of water for domestic use (or effluent) for single premises of the same Customer and on the same property (or multiple premises) where eligible for residential tariff – as above.

Residential use does not include:

- Boarding houses, nursing homes or accommodation of motel or bed and breakfast type ie short term accommodation or where a fee is charged for the use of facilities;
- A clearly public office or shop attached to a dwelling;
- Temporary supplies; and
- One metered connection for three or more independent (or semi independent) dwelling(s).

4.2.2 Business Use

Business use is electricity used for any purpose other than residential. This includes industrial, commercial, accommodation, hospitality and agricultural uses.

4.2.3 Combined Business/Residential Use

The customer is responsible for ensuring that facilities are provided for metering the use of electricity for each purpose. Where such facilities are impractical or not provided, the distribution tariff can be assigned on the basis of majority use. Where it is known that a connection to a dwelling is subject to dual business/residential usage (and separate metering cannot be installed) then, in the absence of any detailed information, the category should be determined by the majority floor space usage of the building for which the electricity supply is provided for.

4.2.4 Controlled Load

Controlled load tariff is only permitted to be used in conjunction with residential tariffs. Where an existing supply has some other tariff in conjunction with Controlled Load then the combination may remain as is. However, if the customer seeks to change business tariff or have an alteration to the site then they will be placed on the current applicable business tariff and they can no longer retain the OPCL component.

OPCL tariff is available for approved applications via some form of control by SA Power Networks. The timing of the OPCL component is subject to change and determined by the SA Power Networks Manager Regulation.

Where a dual element water heating system has a switched OPCL supply for the bottom element and a continuous OPCL supply for the top element, then that arrangement can be retained as is. For new or additional OPCL installations a continuous supply on an OPCL tariff is no longer available; only a switched supply during 1000-1500 CST time period is available.

Approved applications for an OPCL tariff include permanently installed storage water heaters with a capacity of 125 litres or more, underfloor (slab heating), swimming pool or spa heating. For swimming pool or spa applications, the heating element is permitted to be connected to OPCL circuit; pumps and auxiliaries are to be on the accompanying tariff. Electric vehicle charging will also be allowed under certain conditions, for more information refer to the 'Notes accompanying the Distribution Tariffs'.

4.3 Network Tariffs

The network tariff is independent of any retail pricing plan, contract or tariff. There are only a few core tariffs in each group with minor variants.

The variants allow for:

- Optional metering needs (eg type 1-5)
- Monthly/quarterly readings
- Combination with controlled load tariff

The current tariffs and eligibility criteria are listed on the SA Power Networks internet and intranet sites: Please refer to Section 8 for 2017/18 Network Tariffs.

4.3.1 Low Voltage Residential Tariff Class

Tariff Name	Tariff Description	Tariff Code
Low Voltage Residential - Single Rate	Low Voltage Residential - Single Rate - Quarterly	RSR
	Low Voltage Residential - Single Rate Quarterly with Controlled Load	RSROPCL
	Low Voltage Residential - Single Rate - Monthly	RSR
	Low Voltage Residential - Single Rate – Monthly- with Controlled Load	RSROPCL
	Low Voltage Residential – Monthly Demand	MRD
	Low Voltage Residential – Monthly Demand with Controlled Load	MRDOPCL
OPCL	Controlled Load - Tariff Component	Included above

Note:

- A retailer may offer a residential customer a time-of-use contract which will require a two rate meter or interval meter to be installed however, the network tariff will remain as RSR.
- In 2014/2015, SA Power Networks introduced a monthly demand tariff (tariff codes MRD and MRDOPCL). This tariff is available to low voltage residential customers only (on an opt-in basis), and requires a type 1-4 or type 5 monthly read meter.

4.3.2 Small LV Business Tariffs (<160kMWhs)

Existing small LV market customers (less than 160kMWhs per annum) connected before 1 July 2015 can remain on their existing tariff including BSR and SLV.

Different arrangements apply to new customers, some existing customers who change their electricity supply arrangements and existing customers who breach the 250kVA threshold.

The following tariffs are obsolete and closed to new applicants:

- Business single rate tariffs (BSR and BSROPCL) are only available to existing BSR customers whilst they remain on that tariff.
- The business annual agreed kVA demand tariff (SLV) is obsolete from July 2016, and is only available to existing SLV customers whilst they remain on that tariff.

New small LV business customers with a three phase supply will be assigned to an Actual Demand tariff.

Tariff Name	Tariff Description	Tariff Code
Obsolete tariff only available to existing customers connected before 1 July 2015	Low Voltage - Business Single Rate - Quarterly Low Voltage - Business Single Rate – Quarterly with Controlled Load	BSR BSROPCL
Low Voltage Business Single Rate	Low Voltage - Business Single Rate - Monthly Low Voltage - Business Single Rate – Monthly with Controlled Load	BSR BSROPCL
Controlled Load - Tariff Component	Obsolete tariff for Business tariff customers (subject to qualification)	OPCL
Low Voltage Business Two Rate	Low Voltage Business Two Rate - Quarterly Low Voltage Business Two Rate – Quarterly with Controlled Load	B2R B2ROPCL
Low voltage Business actual demand	Small Business monthly actual kVA demand Small Business monthly actual kVA demand transition	SBD SBDT
Small business Agreed demand	Small Business Agreed Annual kVA demand Obsolete tariff only available to existing customers connected before 1 July 2015	SLV

Cost-reflective tariffs (eg SBD, SBDT and the obsolete SLV) are required for some small business customers, including:

- Customers with peak demand that has exceeded 250 kVA in the last two years;
- New customers (July 2010 to June 2015) that required CT metering because of their capacity needs;
- Customers with CT metering who altered their supply arrangements since July 2010 (eg obtained increased capacity, installed an inverter and/or installed embedded generation);
- New small LV business customers (from July 2015) that have three-phase supply; and
- Customers with three phase supply who alter their supply arrangements from July 2015 onwards.

Small LV business customers who are not required to use cost-reflective tariffs can elect to use these tariffs (by request to their retailer who will advise SA Power Networks). These customers can also elect to revert back to B2R if they so choose after a minimum of 12 months on cost-reflective tariffs.

Note that installing a new meter is not an alteration of supply by itself.

Note that a small business customer required to use cost-reflective tariffs can elect to use the transition tariff SBDT, by request through their retailer.

4.3.3 Large LV Business Tariffs (>160MWhr)

All large business customers are required to use cost-reflective tariffs. Large customers are determined as those who are consuming more than 160 MWh over a 12-month period during the last two years. Where data for a full year is not available, forecast usage data and/or pro-rate usage data to date may be used to determine if usage exceeds 160 MWh pa.

These tariffs all require a Type 1-3 meter, or a Type 4 or Type 5 meter with kVAr functionality.

Business Monthly Actual kVA Demand Tariff:

This tariff incorporates three demand periods:

- Peak Demand Period

This is the peak demand reached on a work day in the months of November, December, January, February and March in the peak demand period 4pm to 9pm. This demand is reset each month following the meter read. Public holidays are excluded from work days.

- Shoulder Demand Period

This is the demand reached on a work day each month through the year in the shoulder demand period 12 midday to 4pm. This demand is reset each month after the meter is read.

- Off Peak Demand Period

This is the demand reached in the periods outside of the monthly shoulder and peak demand periods. The 2016/17 tariffs have no charge for this period. A customer must remain on this tariff for a minimum of 12 months. It is not permitted to change between the Agreed Demand tariff and the Actual (monthly) Demand tariff during a 12-month period.

Tariff Name	Tariff Description	Tariff Codes
Low voltage business transition (type 6 meter only)	Large Business Single Rate Transition (type 6 meter) Large Business Two Rate Transition (type 6 meter)	LBSR LB2R
Low voltage Business actual demand	Business Monthly Actual kVA Demand	BD
Low voltage Business agreed demand	Business Annual Agreed kVA Demand Sportsground Business Annual Agreed kVA Demand Business Annual Agreed kVA Demand (Back-up) Business Annual Agreed kVA Demand (Negotiated service)	LV LVSG LVB LVN

4.3.4 Business Annual Agreed kVA Demand Tariff (LV):

This tariff incorporates two demand periods where a level of demand is agreed with the customer by SA Power Networks. The agreed demand ratchets up in situations where a customer uses more demand than previously agreed.

The setting of the agreed demand is a very important part of the tariff as this then becomes a contractual agreement with the customer for the capacity in kVA that is available to the NMI. The customer can negotiate changes to this agreed demand or capacity and there are processes for these requests. For sites that are still within the revenue rebate period, a demand reduction request will also require a negotiated change to the connection contract and this may result in a one-off charge. An SA Power Networks' Customer Manager needs to be part of these negotiations.

If a customer requests a reduction in demand then they need to apply in writing and if their demand increases within 12 months of the change, then SA Power Networks will back date the increased demand network charges to the date of the reduction. If the customer increases demand beyond 12 months from the requested reduction in demand, then normal processes will be followed and all charges and rebates will be applied.

If the customer wishes to increase their agreed demand or they breach their existing agreed demand, the customer manager will consult with Customer Solutions who will provide an offer letter with all applicable charges for the customer.

- **Peak Demand**

This is the peak demand agreed/reached on a work day in the months of November, December, January, February and March in the peak demand period 12 noon to 9pm. This demand is only reset upon agreement. The customer may request an agreed demand reset through their retailer.

- **Additional Demand**

Additional demand is the difference between the level of demand agreed/reached by a customer at anytime in the year and that agree/reached during during the peak demand period. This demand is only reset upon agreement. The customer may request an agreed demand reset through their retailer.

Note:

There are a few variants used in the billing process to allow for some legacy situations without adversely affecting the customer.

- An Actual Demand kVA Transition tariff (BDT) has been used to manage those large business customers previously using energy tariffs that would otherwise be worse off under actual demand. SA Power Networks has assigned these customers to this tariff during 2015/16. It is not an optional tariff. Customers assigned to BDT can opt-out and select an actual demand (BD) or agreed demand (LV) tariff if they wish. The BDT transition tariff will become increasingly cost-reflective each year, with full cost-reflectivity by July 2020. Customers have a period of transition to either adjust their electrical needs or adapt to a higher cost of electricity.
- The Sportsground annual agreed demand tariff is only for community sporting clubs with a large lighting load demand. The agreed demand is measured on workdays from December to February between 12 noon and 7pm. Additional

demand applies to the increment in demand outside of peak times eg from the sportslighting. It may be that tariff BD is financially preferable for some sporting clubs if the lights are not used every month throughout the year.

4.3.5 HV Business Tariffs:

The HV Business tariffs apply to customers taking supply at high voltages (generally at 11kV). The tariff options available use the same concepts as the LV Large Business tariff options, eg Annual Agreed Demand (LV and HV, HV400) and Monthly Actual Demand (BD and HBD). See 4.3.3 for details.

Tariff Name	Tariff Description	Tariff Code
High Voltage – kVA Actual Demand	High Voltage Actual Demand KVA Monthly	HBD
High Voltage - kVA Agreed Demand	High Voltage Annual Agreed Demand KVA High Voltage Annual Agreed Demand KVA < 400kVA	HV HV400
High Voltage - kVA Demand	High Voltage Demand KVA (Back-up) High Voltage Demand KVA (Negotiated service)	HVB HVN

4.3.6 Major Business (11, 33, 66kV) Tariff

The Major Business tariffs apply to customers taking supply at high voltages from zone substations (ZSN, generally at 11kV) or from sub-transmission voltages (STR, at 33kV or 66kV). The tariff options available use the same concepts as the LV Large Business tariff options, eg Annual Agreed Demand (LV and ZSN, STR). Locational tariffs are used for those customers where the site has used/uses more than 10MVA and/or 40GWh usage pa. See 4.3.3 for details.

Tariff Name	Tariff Description	Tariff Code
Zone Sub-station (kVA)	Zone Substation Annual Agreed kVA Demand (Non-locational) Zone Substation kVA (Back-up) Zone Substation Annual Agreed kVA Demand (Locational) (the NMI numbers are shown on these tariffs)	ZSN ZSNB ZSNXXX
Sub Transmission (kVA)	Subtransmission Annual Agreed kVA Demand (Non-locational) Subtransmission kVA (Back-up) Subtransmission Annual Agreed kVA Demand (Locational) (the NMI numbers are shown on these tariffs)	STN STNB STNXXX

Note:

There are a few variants used in the billing process to allow for some legacy situations without adversely affecting the customer.

- For connections with very large usage where individual transmission charges apply 'XXX' is replaced with the last three digits of the specific NMI.
- Where SA Power Networks require a minimum of a type 5 meter for a demand based tariff, customers are free to choose another metering provider and have a type 1 to 4 meter.

Actual Demand Tariff

This tariff has three demand periods Summer peak November to end March
Shoulder demand on work days all year and the Off peak demand period at all other times.

Time	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
1:00							
2:00							
3:00							
4:00		Off Peak Demand Period					
5:00

4.3.7 Solar Generation Tariffs

SA Power Networks is obliged by the provisions of the Electricity (Feed-in Scheme – Solar Systems) Amendment Act to provide a credit in accordance with the Electricity Act requirements for each kWh for power fed back into the grid generated by a qualifying Small Embedded Generator, (conditions apply, refer to the SA Government Energy website for more details). The system shall only measure export when the PV system output exceeds the instantaneous load requirements of the customer's load at the installation (Net metering).

General Requirements

- Customer needs to qualify for small market status (less than 160MWh per annum).
- Customer using an 'approved' inverter supplied via a solar panel array.
- Have an approved import / export meter.
- No other generation connected to the export meter.

Note:

- This includes both residential and business customers.
- Business customers with 3-phase supply that request an alteration via their electricity retailer (eg to install embedded generation) on an energy only business tariff with a multi phase supply will be shifted to a demand tariff as this is the applicable tariff for a customer with this change in supply. This also applies where the generated export is not eligible for a Government Feed-in Tariff.

Government Feed-in Tariff as per Electricity Act

Tariff Name	Tariff Rebate Description
GENR2028	The original Scheme which closed to new applicants in August 2010. The Scheme requires payments to qualifying generators of 44 cents per kWh for all export until 30 June 2028.
GENR2028S	The Scheme announced by the Government in August 2010, for all subsequent qualifying applications and installations till September 2011. The Scheme requires payments to qualifying generators of 44 cents per kWh for all export until 30 June 2028, up to a daily export of 45kWh.

4.3.8 Un-metered

The default supply is metered. Only where a load is too small (<5 amps) to register on a meter or where metering is deemed to be impractical by SA Power Networks, may a customer apply to have the load connected as un-metered. SA Power Networks is not under any obligation to accept an un-metered load until its suitability is established. In considering the suitability of a load for un-metered tariff SA Power Networks must be satisfied that the electrical usage can be accurately estimated and that the load will not vary.

General requirements

- Load to be located in an accessible public area (to permit inspection and validation);
- Load limiting circuit breaker with provision for SA Power Networks seal must be provided and the circuit breaker is to be set at the load level being requested eg 0.5 amps;
- Loads must be hard wired. Socket outlets are not permitted (unless specifically authorised by the responsible SA Power Networks manager for that specific application);
- The connected equipment must not be changed or altered without prior written notice to, and acceptance from SA Power Networks (other than repair or replace like for like ie same electrical ratings);
- The characteristics, timing or programming of the load must not be altered without prior written notice to and acceptance by SA Power Networks; and
- Equipment specifications, inventory tables and test results must be provided prior to a load being considered for connection.

There are many variants used in the billing process which primarily identify the type of un-metered load and the electrical rating. Irrespective of the billing tariff used the network (energy delivery) component is based on one of the two tariffs below. The billing tariff may include additional consideration for excluded services such as lamp replacement (CLER lighting).

Type 7 Loads

Unmetered loads are described as having ‘Type 7’ metering in the Rules and their consumption is estimated for the purposes of market settlements.

Approved Type 7 loads are contestable in the NEM ie choice of retailer. Type 7 load tables are published on AEMO’s website. The current approved Type 7 loads include loads of the following types:

- ***Lighting on SAPN assets*** – Where SA Power Networks maintains the light fittings. The lighting is installed by SA Power Networks on SA Power Networks’ poles or columns for illumination of roadways, pathways, car parks, and public spaces. This category also includes lighting standards installed to SA Power Networks specifications in URDs. Lighting under SLUoS is owned and maintained by SA Power Networks. Ownership and warranty management for light fittings under SAPN, TFI, and PLC tariffs are specified in Attachment 1 – Notes for Public Lighting Tariffs 2016/2017;
- ***CLER*** (Customer Lantern Equipment Rate) – Lighting for public areas where the customer (Council) own the luminaire and SA Power Networks has the responsibility for changing globes only;
- ***Energy only*** – Where the Council / Customer own the fitting and are responsible for all maintenance;

- Traffic signals; and
- **Traffic signalling equipment** – of a type specified in the approved Type 7 load tables.

The approval of a Type 7 load is dependent on the assessment of the load characteristics as well as the processes used to maintain an inventory of the loads. Consequently, only loads of types in the published load tables and belonging to approved deemed parties. The TUoS and DUoS charges are levied in accordance with the published network tariffs however, street lighting and CLER both require an additional component for provision of excluded services (eg lamp replacement with CLER) – the pricing for these services is termed negotiated and is described in Section 9 of this manual.

Other Non Contestable Un-Metered Loads

Other un-metered loads are not Type 7. These other loads include:

- Night sight lighting
- Phone booths
- Telecommunication CMUX and NBN
- Bus shelters

5. POWER FACTOR

5.1 Excess kVAr Charges

Customers must comply with the South Australian Distribution Code requirements in particular Part B Connection and Supply Contract Power Factor. If a customer installation is not compliant at times of their monthly peak demand, then an annual charge is applied.

NMI	Excess kVAr 2017/18 excl GST \$ pa	NMI	Excess kVAr 2017/18 excl GST \$ pa	NMI	Excess kVAr 2017/18 excl GST \$ pa

6. NEGOTIATED DISTRIBUTION SERVICES

6.1 Basic Connection Services

6.1.1 Purpose

This section details the basic connection services provided to customers for which a default fee will be charged. These connection services are of such a nature that a default charge can be calculated and listed in the indicative price list below.

6.1.2 Discussion

Basic connection services relate to a connection (or a proposed connection) between SA Power Networks distribution system and the customer's installation.

The basic connection services offered by SA Power Networks are listed in the table on indicative prices below. The provision of these services involve minimal or no augmentation of the distribution network.

Under the National Electricity Rules (NER), there are two categories of connection contracts which are:

1. Connection contract – which is associated with establishing or altering the physical connection to the distribution system.

SA Power Networks has two connection contracts for basic connection services and each have a model standing offer (MSO):

- Basic connection service with no embedded generators; and/or
- Small embedded generators (SEG).

2. Customer connection contract – which is associated with the ongoing supply of energy to a retail customer's premises and is normally deemed to apply (ie customer does not need to sign or agree to the contract). These contracts commence on energisation or when a customer starts consuming energy.

The two model standing offers along with the table of Basic Connection Services indicative prices have been approved by the Australian Energy Regulator (AER) and are published on our website at www.sapowernetworks.com.au.

The customer connection contract is a Deemed Standard Connection Contract (DSCC) that applies to all small customers (ie electricity consumption less than 160MWh pa).

A request for a basic connection service can be expedited by not requesting a formal offer and when making an application you are accepting both the Terms and Conditions of the MSO and the default charge when the application is made.

The charge recovers the average cost of performing such work including labour, materials, vehicles, other services, overheads and a return on investment.

SA Power Networks charge will be based on the cost of the works to provide the service. The work (if over \$5,000 GST exclusive), will not be undertaken until the necessary fee is paid by the customer. If the charges are less than \$5,000 (GST exclusive) payment will be charged at the completion of work.

SA Power Networks default service is a low voltage single phase up to 100 Amps. This service is provided by the installation of an over to under service on an existing low voltage stobie pole or from an existing service pit/pillar that is located up to 25 metres from the property boundary on the same side of the street.

6.1.3 Basic Connection Services Indicative Price List

New Supply – (Service provision charges, excluding metering charges)

Category	Service Type	Service Description	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
1 phase or multi phase <100Amp	Over to under service On Existing Pole (see diagram 1 or 1A)	<p>Provision of an over to under service on an existing pole that is located up to 25 metres from the customer's property boundary.</p> <p>A customer may elect to trench to a pole on the same side of the street which is greater than 25 metres, but no further than 100 metres from their property boundary. The customer will be responsible for all costs associated with these works and obtaining all relevant authorities' approvals. Applies to installations where no refund to parent group (or Pioneer Scheme) is owing.</p> <p>Standard charge is for a typical transformer area only.</p> <p>Does not apply to Residential developments.</p> <p>No Pioneer Scheme will apply.</p>	\$573.00	\$630.30	BCS 100	N/A
1 phase or multi phase <100Amp	Over to under service New pole required (see diagram 1A)	<p>Provision an over to under service on a new low voltage pole which includes one span of LV ABC mains up to 25 metres from the existing supply mains.</p> <p>Applies to installations where no refund to parent group (or Pioneer Scheme) is owing.</p> <p>Standard charge is for a typical transformer area only.</p> <p>Does not apply to Residential developments.</p> <p>No Pioneer Scheme will apply.</p>	\$3,023.00	\$3,325.30	BCS136	N/A

Category	Service Type	Service Description	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
1 phase or multi phase <100Amp	Over to under service New pole required <i>Existing block split into two (both applications received at the same time)</i> (see diagram 4)	Provision an over to under service on a new low voltage pole which includes one span of LV ABC mains up to 25 metres from the existing supply mains. To be applied in situations where a residential block has been divided into two and the applications for supply are received in a similar timeframe. This standard charge is to be applied to each customer. Applies to installations where no refund to parent group (or Pioneer Scheme) is owing. Standard charge is for a typical transformer area only. Does not apply to Residential developments. No Pioneer Scheme will apply.	\$1,780.00	\$1,958.00	BCS 146	N/A
1 phase or multi phase <100Amp	Overhead service on existing pole (see diagram 3 or 3A)	Provision of an overhead service from an existing low voltage pole in lieu of an over to under service. Applies to installations where no refund to parent group (or Pioneer Scheme) is owing. Standard charge is for a typical transformer area only. Does not apply to Residential developments. No Pioneer Scheme will apply.	\$792.00	\$871.20	BCS137	N/A
1 phase or multi phase <100Amp	Overhead service on a new pole (see diagram 3A)	Provision of an overhead service from a new low voltage pole in lieu of an over to under service. Applies to installations where no refund to parent group (or Pioneer Scheme) is owing. Standard charge is for a typical transformer area only. Does not apply to Residential developments. No Pioneer Scheme will apply.	\$3,242.00	\$3,566.20	BCS 102	N/A

6.1.4 Service Alterations (Service provision charges, excluding meter charges)

Category	Service Type	Service Description	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Replace existing <100Amp 1phase service or multi phase <100Amp service	Over to under service (see diagram 1) or Existing pit/pillar (see diagram 2)	Replacement of an existing overhead service to an over to under or underground service; or any alteration/upgrade or relocation of an over to under service.	\$271.00	\$298.10	BCS 106	N/A
Upgrade /Relocate/Alter or replace existing 1 phase <100Amp or multi phase <100Amp overhead service	Overhead service (see diagram 3)	Customer request for an Upgrade / Relocation / Alteration or replacement of an existing overhead service.	\$329.00	\$361.90	BCS 107	N/A
Upgrade to a multi phase <100Amp service	Over to under service (see diagram 1) or Overhead Service (see diagram 3)	Provision of an over to under service on an existing low voltage stobie pole or an overhead service from an existing low voltage stobie pole and the requested number of phases are available.	\$523.00	\$575.30	BCS 109	N/A
Upgrade to a multi phase <100Amp service	Existing service pit/pillar (see diagram 2)	Connection provided from an existing suitable low voltage service pit / pillar and the requested number of phases are available at the service point.	\$113.80	\$125.18	BCS 110	N/A
Additional <100Amp service for a duplex split ie Existing metered strata title split into two Torrens titles (no additional load)	Over to under service (see diagram 1) or Existing pit/pillar (see diagram 2)	Provision of an over to under service on an existing low voltage stobie pole or from an existing service pit/pillar that is located up to 25 metres from the customer's property boundary on the same side of the street and the requested number of phases are available.	\$419.00	\$460.90	BCS 111	N/A
Overhead Service	Change from an existing over to under or underground service to an overhead service and the requested number of phases are available	Multi phase <100Amp.	\$785.00	\$863.50	BCS 206	N/A

6.1.5 Unmetered Supply

Category	Service Type	Service Description	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
1 phase unmetered supply only for approved applications eg public telephones, traffic signals, council lighting, parking machines, bus shelters and NBN Cubicles etc.	Over to under service on existing pole (see diagram 1)	Provision of an over to under service on an existing low voltage stobie pole. Applies to pre and post July 2015 installations where no refund to parent group is owing. Standard charge is for a typical transformer area only. Customer must wire to existing pole/pit.	\$573.00	\$630.30	BCS 112	N/A
1 phase unmetered supply only for approved applications eg public telephones, traffic signals, council lighting, parking machines, bus shelters and NBN Cubicles etc.	Existing pit/pillar (see diagram 2)	Provision of a connection from an existing service pit/pillar. Applies to pre and post July 2015 installations where no refund to parent group is owing. Standard charge is for a typical transformer area only. Customer must wire to existing pole/pit.	\$313.00	\$344.30	BCS 149	N/A

6.2 Negotiated Connection Services

6.2.1 Purpose

This section details the negotiated connection services provided to customers. A fee will normally be charged for the provision of an offer. This fee is deducted from the connection service charge and is non-refundable if you don't proceed with the connection.

6.2.2 Discussion

Negotiated connection services are all services that relate to a connection (or a proposed connection) between SA Power Networks distribution system and the customers premises but are not basic connection services as outlined in 6.1 above.

Examples of a Negotiated Connection Service are, but not limited to:

- Provision of a service to a new low voltage service pit/pillar that is located > 25 metres from the existing supply mains.
- Installation of a stobie pole/s to provide for a low voltage service >25m from existing supply mains
- Services >100A single or three phase in a typical three phase area
- Services > 63A in a SWER area

Negotiated Connection Services are charged at full cost of works plus augmentation charges if applicable minus an Incremental Revenue Rebate if applicable. In relation to a negotiated connection service for a customers supply, SA Power Networks offer will be based on our most technically feasible and minimum cost option for our works to make the connection. Any requested work in excess of the most technically feasible option will be at the customer's expense.

The negotiated connection contract is SA Power Networks formal written offer and the associated terms and conditions. Note: this contract is separate to the ongoing customer connection contract which commences upon energisation.

From 1 July 2016, the payment schedule will be as follows:

- If customer contribution is \$5,000 (GST Exclusive) or less, then full payment will be required on acceptance of the offer.
- If customer contribution is greater than \$5,000 (GST Exclusive), then:
 - Full payment of the connection charge is required if construction will commence within three months of acceptance; or
 - Initial payment of 20% of the total costs on acceptance of offer plus pre-payment or any specialised or non-standard assets that need to be ordered, followed by the remainder one month prior to construction. Where construction is to be completed in stages, then the costs of each stage must be paid one month prior to construction of that stage.

Any variation to this must be approved by SA Power Networks.

6.3 Negotiated Distribution Services (Non Connection)

6.3.1 Purpose

This section details the negotiated distribution services provided to customers. A fee will normally be charged for these services and is non-deductable/non-refundable.

6.3.2 Discussion

Negotiated distribution services are all services that are not related to a connection (or proposed connection) between SA Power Networks distribution system and the customer's premises.

The application of all connection and/or disconnection default fees are NMI based, and are applied to each and every NMI impacted by the work undertaken by SA Power Networks, irrespective of the number of service connection points to a property.

Alterations and changes to specific metering types can only be provided where permitted under the National Electricity Rules and by the relevant market participants.

Negotiated Distribution Services (Non Connection) Indicative Price List**Mains & Services**

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Additional <100Amp service 1 phase or multi phase	Provision of an additional <100Amp service - SA Power Networks agreement required Augmentation may apply.	Provision of an over to under, underground or overhead service	Full cost	Full cost	NDS 300	N/A
Permanent Removal of LV Supply (Abolishment) for single <100Amp applications.	Request for the permanent abolishment of the LV supply provision (This does not include the removal of additional distribution assets ie poles and transformers).		\$125.10	\$137.61	NDS 301	N/A
Temporary Disconnect and Reconnect for customer	Requests for a temporary D/N and R/N of LV service, (<100Amp), requiring a line truck attendance.		\$270.60	\$297.66	NDS 302	N/A
	Requests for a temporary D/N and R/N of LV service, (<100Amp), requiring a single person crew attendance.		\$123.00	\$135.30	NDS 330	N/A
	Temporary isolation of customers LV supply, >100Amp capacity.		Full cost	Full cost	NDS 303	N/A
	Requests for a temporary D/N and R/N of LV OH service (<100Amp), requiring a single person crew attendance.		\$264.00	\$290.40	NDS 430	N/A
Temporary Disconnect and Reconnect for Retailer	Requests for a temporary D/N and R/N of LV service, (<100Amp), requiring a single person crew attendance.		\$120.00	\$132.00	NDS 431	N/A
	Temporary isolation of customers LV supply, >100Amp capacity.		Full cost	Full cost	NDS 432	N/A

Metering Charges

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Charge for Meter Removal	Includes both single and multi phase meters eg removal of redundant Controlled Load tariff meter. (Not permanent removal of supply or NMI)	First meter	\$89.20	\$98.12	NDS 304	RMFE
		Each additional meter	No charge	No charge	NDS 305	RMFA
Upgrade of meters	Request by a customer to change meters to Electronic meter eg to make room in a meter box for an RCD or extra. Equipment thereby avoiding the need to increase the size of the meter box or replace the board.	One single phase electronic meter	\$391.70	\$430.87	NDS 306	N/A
		Cost per additional single phase electronic meter	\$288.20	\$317.02	NDS 307	N/A
Meter Reconfiguration	On-site reconfiguration of meters in response to customer requests for changes to tariffs, two-rate meter settings or time clocks.	First meter	\$89.20	\$98.12	NDS 308	MRFE
		Each additional meter	No charge	No charge	NDS 309	MRFA
Type 1-4 Meter Charges (Meter provision only excludes meter read fees).	Installation where reliable mobile telecommunications service is available.		No charge	No charge	NDS 312	N/A
	Installation where reliable mobile telecommunications service is not available.		Full cost	Full cost	NDS 313	N/A
	Annual Fee (Type 4 meter).	Charge per meter per annum	\$682.00	\$750.20	NDS 314	N/A
	Exit Fee where meter is removed within the first 12 months of installation.		\$1,137.00	\$1,250.70	NDS 315	N/A
	Annual Fee (Type 3 meter).		Full cost	Full cost	NDS 316	N/A
	Annual Fee (Type 2 meter).				NDS 317	N/A
	Annual Fee (Type 1 meter).				NDS 318	N/A

Metering Charges (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Type 5 Meter - communications device	Installation of communications device for Type 5 CT connected and whole current meters. (Where operational difficulties reasonably require the metering installation to be capable of remote acquisition).	New premise installation charge	\$66.00	\$72.60	NDS 324	N/A
		Existing premise installation charge	\$194.00	\$213.40	NDS 325	N/A
		Annual asset fee - this is in addition to the Type 5 Meter annual fee	\$380.00	\$418.00	NDS 326	N/A
		Exit fee for the communications device	\$194.00	\$213.40	NDS 327	N/A
Type 6 Meter Charges	Applies to large customers (>160MWh pa) having a Type 6 meter.	Charge per meter per annum	\$248.10	\$272.91	NDS 328	N/A

Third Party Connection Works Charges

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Specification Fees	This covers the costs of work undertaken in preparing and issuing the specification including 1 site visit for customer extension works. Note: project value is based on contestable value of project.	\$0 - \$100k project	\$1,855.00	\$2,040.50	NDS 340	N/A
		\$101k - \$200k project	\$3,075.00	\$3,382.50	NDS 341	N/A
		> \$200k project	Full cost	Full cost	NDS 342	N/A
Specification re-compliance	Resubmission of a design which previously did not satisfy the SA Power Networks spec.		Full cost	Full cost	NDS 343	N/A
Works/Design compliance	Works/design compliance of an asset to be vested by a customer/developer to SA Power Networks. This includes administration, design compliance against specification and vesting. Applies to contestable works such as RDs (real estate developments) and contestable connections where SA Power Networks is not the constructor of the extension works.		Full cost	Full cost	NDS 344	N/A
Works re-inspection for compliance	Re-inspection of an asset issued with a non-compliance notice, (including travelling time).	Minimum (up to 3 hours) normal time	\$317.80	\$349.58	NDS 345	N/A
		Hourly rate after 3 hrs normal time	\$103.50	\$113.85	NDS 346	N/A
		Hourly rate out of hours or part thereof	\$125.10	\$137.61	NDS 347	N/A
Network Infrastructure Connection Re-Appointment	When SA Power Networks is required to re-attend a Network Infrastructure Connection Appointment because the network connection could not be completed on the initial appointment as the infrastructure was incomplete, unsafe or inaccessible. Third Party Connection Works Charges (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Indicative Offer	<p>This covers the costs of work undertaken in preparing and issuing an indicative estimate letter for customer projects. The indicative fee is non-refundable and non-deductible should the applicant proceed to a firm offer.</p> <p>The project value is considered as the cost for the Project Management + Capital Works + Civil Works.</p> <p>It does not include augmentation charges or Incremental Revenue Rebates.</p> <p>In a contestable scenario the project value also includes the costs of the contestable works.</p>	Project Value \$0-100k	No charge	No charge	NDS 349	N/A
		Project Value \$101k-\$200k	\$543.30	\$597.63	NDS 425	N/A
		Project Value>\$200k or Multiple Offers – Full Cost	\$93.18/Hr	\$102.50/Hr	NDS 350	N/A
Firm Offer	<p>This covers the costs of work undertaken in preparing and issuing an offer letter for customer projects. Firm offer is non-refundable but deductible from the final project amount should the connection proceed within the validity period of the first quote. For all subsequent quotes for the same project the initial fee will be non-deductible, each additional quote will be charged using the initial firm offer principles (ie non-refundable but deductible).</p> <p>The project value is considered as the cost for the Project Management + Capital Works + Civil Works.</p> <p>It does not include augmentation charges or Incremental Revenue Rebates.</p> <p>In a contestable scenario the project value also includes the costs of the contestable works.</p>	Project Value <\$30k	No Charge	No charge	NDS 426	N/A
		Project Value \$31k-\$100k	\$932.80	\$1,026.08	NDS 351	N/A
		Project Value \$101k-\$200k	\$1,830.00	\$2,013.00	NDS 352	N/A
		Project Value > \$200k	Full cost	Full cost	NDS 353	N/A

Third Party Connection Works Charges (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Firm Offer for Embedded Generation (including Energy Storage)	This covers the costs of work undertaken for the network analysis, preparing and issuing an offer letter, contract and associated commissioning for the customer's embedded generation system.	>30kW – 200kW embedded generator	\$2,562.50	\$2,818.75	NDS 427	N/A

Miscellaneous Fees

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Monthly Meter Reading Fee (extra cost of monthly meter reading)	Daily Charge.		\$0.135358/day	\$0.148894/day	NDS 354	N/A
Install pulsed output from existing SA Power Networks metering capable of this functionality (Existing metering may need to be changed for this functionality which will incur the relevant additional metering costs listed for Type 1-4 and Type 5 meters)	Customer requests a pulsed output from the meter for energy management or to display consumption in some form.	Annual charge	\$113.80	\$125.18	NDS 355	N/A
Charge for Meter Test	This charge applies when a customer requests a meter test due to high account or a suspected incorrect functioning PV installation and the SA Power Networks meter is not faulty.	Single phase	\$132.20	\$145.42	NDS 356	SPFE
		Each additional single phase meter	No charge	No charge	NDS 357	SPFA
		3 Phase Meter	\$132.20	\$145.42	NDS 358	MPFE
		Each additional multi phase meter	No charge	No charge	NDS 359	MPFA
Charge for Meter Test (where an appointment has been requested by the customer's retailer)	Charge only applicable when a customer requests a meter test due to high account or a suspected incorrect functioning PV installation and the SA Power Networks' meter is found not to be faulty.	Single phase	\$310.60	\$341.66	N/A	APMTM
		Each additional single phase meter	No charge	No charge	N/A	APMTM
		3 Phase Meter	\$310.60	\$341.66	N/A	APMTM
		Each additional multi phase meter	No charge	No charge	N/A	APMTM
Charge for PV Installation Enquiry	Charge applicable when customer requests SA Power Networks to attend a PV installation which is not functioning correctly and it is determined by the SA Power Networks personnel the problem is a result of the customer's PV installation being incorrectly set/malfunctioning.	Single phase Installation	\$132.20	\$145.42	NDS 360	SPFE
		3 phase Installation	\$132.20	\$145.42	NDS 362	MPFE

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Meter Inspection Fee	This charge applies when a physical inspection is requested due to suspected meter tampering, equipment damage or requested by customer or their retailer.	First meter	\$34.90	\$38.39	NDS 364	MIFE
		Each additional meter	No charge	No charge	NDS 365	N/A
Meter Inspection Fee (where an appointment has been requested by the customer's retailer)	This charge applies when a physical inspection is requested due to suspected meter tampering, equipment damage or requested by customer or their retailer.	First meter	\$175.30	\$192.83	N/A	APTIN
		Each additional meter	No charge	No charge	N/A	APTIN
Excess kVAr Incentive Charge	The Excess kVAr Incentive Charge rate is applied to each excess kVAr required over and above the implied kVAr allowance provided in the South Australian Electricity Distribution Code to meet a customer's Agreed Maximum Demand based on their recorded power factor at the time of their Actual Maximum Demand. The charge is applied to customers currently assigned to a network demand tariff who are not code compliant with respect to power factor at the time of their Actual Maximum Demand requiring greater than 10kVAr of correction. The charge is reviewed annually after the completion of the maximum demand period and is invoiced monthly (ie the annual charge divided by 12) effective 1 July following the maximum demand period. Customers will cease being levied the charge once the site has become compliant by installation of power factor correction equipment or other measures deemed acceptable to SA Power Networks and have also notified SA Power Networks of the compliance.	Rate applied per amount of excess kVAr	\$48.00/kVAr	\$52.80/kVAr	NDS 366	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Back up feeder charge	This charge is applied when a customer has two connection points supplying their site and full supply can be taken from either supply point.	These charges are negotiated with the Major Customer Manager	Full cost	Full cost	NDS 367	N/A
Pole Relocation	Relocation of an existing electricity pole for customer convenience.		Full cost	Full cost	NDS 368	N/A
Service pit / pillar Relocation	Relocation of an existing electricity pit / pillar for customer convenience.		Full cost	Full cost	NDS 369	N/A
Service pit / pillar Raising/Lowering	Raise or lower a pit / pillar including a driveway pit (where pit was at satisfactory level when installed and vested to SA Power Networks). Price can vary dependent on crew travelling time.		Full cost	Full cost	NDS 370	N/A
Temporary covering (not full insulation) of LV Mains (excluding road crossings which will be estimated as required based on number of units and time).	Work to erect and remove 'Tiger Tails' from LV Mains. (NOTE: Price is for a 3-month period only and an additional charge(s) of the same amount will be applied for each subsequent 3-month period beyond the initial installation date until the tails are removed).	Normal Time	\$9.27 per unit (min fee \$126.27)	\$10.20 per unit (min fee \$138.90)	NDS 371	N/A
		Overtime	\$9.18 per unit plus \$631.09	\$10.10 per unit plus \$694.20	NDS 372	N/A
Location of underground mains at the request of a customer	Provision of plans from the office.		No charge	No charge	NDS 373	N/A
	Site visit.	Under 1 hour in Normal Time	No charge	No charge	NDS 374	N/A
		Over 1 hour in Normal Time	\$104.60 Per hour or part thereof	\$115.06 Per hour or part thereof	NDS 375	N/A
		Out of Normal Time	\$151.70 Per hour or part thereof	\$166.87 Per hour or part thereof	NDS 376	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Asset Information Requests	Provision of asset information relating to condition, rating or available capacity to engineering consultants and electrical contractors and the supply of GIS information to customers or authorities.	Less than 1 hours work - per request	\$84.10	\$92.51	NDS 377	N/A
		Over 1 hour work	Full cost	Full cost	NDS 378	N/A
	Confirmation of available equipment in ground level transformers where the door needs to be opened by a Customer Service Officer.		\$136.00	\$149.60	NDS 379	N/A
Network Access Request	Organisation of switching requirements and field work to allow 3rd party access to de-energised assets.		Full cost plus \$274.55 for admin and billing	Full cost plus \$302.00 for admin and billing	NDS 380	N/A
Network Access Management Fee	Management of access request.	Where under 1/2 day of planning required	\$275.00	\$302.50	NDS 381	N/A
Network Access Request Cancellation Fee	Where cancellation of a Network Access Permit is within less than 2 full business days prior to confirmed date.		\$272.00	\$299.20	NDS 429	N/A
Repeated Call Outs for Repairs to SA Power Networks equipment caused by the customer (not first call out)	Following notification of requirement to upgrade service size. Typically, \$452 + GST for LV and \$803 + GST for HV fuses.	LV fuse	Full cost	Full cost	NDS 382	N/A
		HV fuse	Full cost	Full cost	NDS 383	N/A
Wasted Visit – Scheduled Customer Connection Appointment	Where SA Power Networks was unable to complete the scheduled connection or metering works due to the customer's installation not being ready or compliant.		\$165.00	\$181.50	NDS 396	N/A
'No-fault' attendance	Attendance at the customer's premises at the customer's or their agent's request, where it is determined that the fault was not related to SA Power Networks' equipment or infrastructure.		\$165.00	\$181.50	NDS 420	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Special Meter Reader Visit	A Special Meter Reading Visit occurs when a customer requests a check read or special read at a Service Provision.		\$13.70	\$15.07	NDS 386	SRFE
	A Special Meter Reading Visit occurs when a customer requests a check read or special read at a Service Provision after business hours.		\$87.10	\$95.81	NDS 387	N/A
	A Special Meter Reading visit which is subsequently cancelled.		\$13.70	\$15.07	NDS 388	N/A
Subsequent Attempt to Read Meter	This relates to subsequent attempts to read a meter after a reasonable attempt has been made but has been unsuccessful due to access difficulties.		\$13.70	\$15.07	NDS 389	SUB
High Load Escorts	Assistance to a third party to transport a large vehicular load. Includes provision of labour and equipment to temporarily raise or remove mains to allow load to pass freely.	Hourly rate for administration and checking of route if over 1 hour	\$135.30	\$148.83	NDS 390	N/A
Connection of Security Cameras NOTE: SA Power Networks pole rental extra, also energy tariff to retailer for unmetered supply	Security camera fitted to Stobie pole. Single connection. (Multiple connections at the one location will incur additional costs).		\$228.60	\$251.46	NDS 392	N/A
	Security camera fitted to light column.		\$516.60	\$568.26	NDS 393	N/A
Larceny of Supply - remedial work	Remedial costs where larceny or tampering of SA Power Networks equipment is established (does not include investigation).		Full cost	Full cost	NDS 394	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Responsible Person as defined in NEM	Customers via their retailers may designate SA Power Networks in MSATS to be responsible for this role. If SA Power Networks choose to accept this role in MSATS then it would be implied that the customer / retailer will accept the annual charge.	Annual fee charged monthly (Non Generator sites)	\$2,272.00	\$2,499.20	NDS 395	N/A
		Generator Sites	As negotiated	As negotiated	NDS 424	N/A
Late Cancellation of Connection Appointment	Where a connection appointment is cancelled within less than 2 full business days' notice prior to the connection date by the customer or their agent.		\$82.00	\$90.20	NDS 397	N/A
Site inspection	A site inspection in order to determine the nature of the requested connection service.	Allows 2 hours with travelling	\$229.00	\$251.90	NDS 398	N/A
Negotiation Fee	This fee covers the SA Power Networks Management costs when a customer elects to negotiate the Terms and Conditions of the On Going Connection Contract. The fee includes the cost of resources in the negotiation process. This is in addition to the offer letter fee.	Minimum fee for up to 4 hours	\$411.82 plus \$102.91 per hour thereafter	\$453.00 plus \$113.20 per hour thereafter	NDS 399	N/A
Late payment fee	A late payment fee is charged for non payment of an invoice by the due date. The late fee is for processing and sending a new invoice. Further costs will be incurred if further debt recovery is required.		\$70.70	\$77.77	NDS 400	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Priority Appointment or Pre-arranged out of hours' appointment for new connection or alteration of supply (fixed or anytime)	Provision of a priority connection at the customer's request. Work will be undertaken out of hours or during normal business hours in which case another job will be done after hours to accommodate the requested connection date.	Fixed appointment up to 3hrs (inc requests for specific time and weekends).	\$190.00 per person	\$209.00 per person	NDS 401	N/A
Fee for Reconnection and Disconnection (Retailer Fee)	Includes fee for disconnection and reconnection of supply (if a service order is subsequently cancelled by the retailer, the same fee applies).	D/N at meter	\$36.80	\$40.48	NDS 403	DNFE
		R/C at meter	\$36.80	\$40.48	NDS 404	RCFE
		R/C at meter A/Hours	\$87.10	\$95.81	NDS 405	RCAH
	The fee for reconnection or disconnection at Pillar Box or Pole Top (if a service order is subsequently cancelled by the retailer, the same fee applies).	D/N at Pillar Box or Pole Top	Full cost	Full cost	NDS 406	PDNFE
		R/C at Pillar Box or Pole Top	Full cost	Full cost	NDS 407	PRCFE
		R/C at Pillar Box or Pole Top A/Hours	Full cost	Full cost	NDS 408	PDNAH
Charge for swing and sag calculation	This charge provides for Project Management and the survey work undertaken in preparing and issuing a swing and sag calculation letter for the customer to present to the Office of the Technical Regulatory. This fee is non-refundable and non-deductible. This fee does not provide for the issuing of spatial model files or related data. Provision of this data will be at full cost.	Up to and including 11kV	\$1,230.00	\$1,353.00	NDS 419	N/A
		Voltages >11kV	\$1,640.00	\$1,804.00	NDS 428	N/A

Miscellaneous Fees (cont.)

Category	Service Description	Option	Price (GST Exclusive)	Price (GST Inclusive)	Fee Code	Retail Product Code
Third party funded network upgrades	Third party funded network upgrades, enhancement or other improvements including 'make ready' work for NBN Co.	No Facilities Access Agreement	Full cost	Full cost	NDS 421	N/A
		Facilities Access Agreement	As negotiated	As negotiated	NDS 423	N/A
Provision of energy consumption data	Provision of relevant regional energy consumption data to Local Government Councils.		Full cost	Full cost	NDS 422	N/A

6.4 Developer Charges - Minor Real Estate Development (RD) Connections

This section is to be utilised for Real Estate Developments where the number of metered retail customers does not exceed eight (8) (excluding a landlord meter).

A Real Estate Development is any development where:

- Three or more property titles are created from one or more allotments. They may be classified in various forms but typically will be Torrens Title, Community Title or Strata Title;
- Multi – tenanted sites with three or more metered retail customers

The method of supply can be from either, overhead or underground distribution infrastructure.

6.4.1 Incremental Revenue Rebate (IRR) - Minor Real Estate Development Connections

An average IRR has been calculated based on a state-wide average and has been applied in the selection tables. In calculating the IRR for a development of this nature, consideration was given to:

- The specified design ADMD to be applied to the individual residential sites in the development
- The use of alternate energy sources
- The expected take-up rate for connection services within a development
- Calculated over a 30-year period

(A negotiated connection offer is required for any RD project exceeding 8 metered retail connections).

6.4.2 Augmentation Charges

Augmentation charges have been applied in accordance with the SA Power Networks Connection Policy (published June 2015). The appropriate level of augmentation, based on Dollars per kVA have been included in the selection tables.

ADMD Selection Table

Select the ADMD allocation from the table below, based on the intended dwelling size. If you are unable to confirm dwelling size, assume 6 kVA.

Apply the ADMD chosen in the KVA/Connection row of the selection tables to arrive at the appropriate charge for the development.

Dwelling Size – Average size for the development	ADMD (kVA)
Villas, Townhouses, Apartments (<12 squares/110m ²) (living areas, excluding garages)	4
Small to Medium (12 - 20 squares/110 - 185m ²) (living areas, excluding garages)	6
Medium to Large (20 – 30 squares/185 – 280m ²) (living areas, excluding garages)	8

Selection Tables – Indicative Charges for Developers of Minor Residential Development Projects. (Individually Serviced Retail Connections)

Applicable for a Standard <100A connection in a Typical 4 Wire Low Voltage Transformer Area

Number of Connections	3								
KVA/Connection	4	4	4	6	6	6	8	8	8
Total kVA	12	12	12	18	18	18	24	24	24

BYO Device Lighting Tariffs						
SA Power Networks is considering the development of public lighting tariffs for luminaire/lamp/control combinations defined by customers for use on SA power Networks' infrastructure. That is, flexible tariff arrangements for assets outside of the list of standard luminaires set out below, and tailored to meet the customer's specific requirements. It is envisaged that special terms and conditions would be developed in collaboration with the customer or customer groups to facilitate the provision of such a service. To register interest or to obtain further information, please contact us via email at this address: roadlighting@sapowernetworks.com.au .

Attachment 1 - Notes for Public Lighting Tariffs 2017/18

LED TARIFF NOTES - OVERVIEW

SA Power Networks has developed a new tariff structure and pricing model to facilitate the replacement of existing public lighting with LED lighting. The new tariff structure reflects the source and timing of the funding of luminaire upgrades.

Three new tariffs apply to LED lights on SA Power Networks infrastructure:

- SAPN LED Tariff
- TFI LED Tariff
- PLC LED Tariff

One new tariff applies to LED lights on public lighting customers' infrastructure

- CLER LED Tariff

The Energy Only tariff continues to apply for LED lights as well as other lights.

NEW LED TARIFFS

The **SAPN LED Tariff** applies where SA Power Networks funds a luminaire upgrade or new installation. Volume upgrades are subject to SA Power Networks' funding availability or approval.

Under the SAPN LED Tariff SA Power Networks will fund the luminaire upgrade, and will operate and maintain, repair and/or replace the luminaire and its supporting infrastructure during the term of the agreement.

- Luminaire upgrade means the supply and installation of the new luminaire to a standard specification. The cost of installing, maintaining, or replacing any additional equipment or features above the standard specification, such as special visors or screens, would be agreed and recovered separately.
- Operation includes
 - asset, outage and customer management systems and administration,
 - regulatory compliance,
 - asset and maintenance performance reporting to the Customer, and
 - warranty management as required.
- Maintenance includes cleaning, testing and inspection at appropriate intervals.
- Repair includes replacement of luminaire components as relevant.
- Luminaire replacements would be required due to vandalism, third party damage or post warranty period comprehensive failure.
- Luminaire performance will be no less than applicable luminaire output Standards require. Availability will be subject to regulated service levels.

The cost of any service levels higher than those set out above would be agreed and recovered separately.

The **TFI LED Tariff** applies where lighting infrastructure is transferred ('gifted' or 'vested') to SA Power Networks. It is also available to Customers that wish to fund the initial cost of a luminaire upgrade or new installation, but want SA Power Networks to be responsible for luminaire replacements.

Under the TFI LED Tariff SA Power Networks will operate and maintain, repair and/or replace the luminaire and its supporting infrastructure during the term of the agreement.

- Operation includes
 - asset, outage and customer management systems and administration,
 - regulatory compliance,
 - asset and maintenance performance reporting to the Customer, and
 - warranty management as required.
- Maintenance includes cleaning, testing and inspection at appropriate intervals.
- Repair includes replacement of luminaire components as relevant.
- Luminaire replacements would be required due to vandalism, third party damage or post warranty period comprehensive failure.
- The cost of maintaining or replacing any additional equipment or features above the standard specification, such as special visors or screens, would be agreed and recovered separately.
- Luminaire performance will be no less than applicable luminaire output Standards require.
Availability will be subject to regulated service levels.

The cost of any service levels higher than those set out above would be agreed and recovered separately.

The **PLC LED Tariff** applies where the Customer funds the cost of a luminaire upgrade or new installation, and remains responsible for post warranty period luminaire replacements. SA Power Networks would procure and install the new luminaire, or install a new luminaire supplied by the Customer.

Under the PLC LED Tariff SA Power Networks will operate, maintain, and repair the luminaire, and repair and/or replace its supporting infrastructure, during the term of the agreement.

- Operation includes
 - asset, outage and customer management systems and administration,
 - regulatory compliance,
 - asset and maintenance performance reporting to the Customer, and
 - warranty management as required.
- Maintenance includes cleaning, testing and inspection at appropriate intervals.
- Repair includes replacement of luminaire components as relevant.
- The cost of maintaining or replacing any additional equipment or features above the standard specification, such as special visors or screens, would be agreed and recovered separately.
- Luminaire replacements required due to vandalism, third party damage, post warranty period comprehensive failure, or at the end of the asset's economic life, would be the responsibility of the Customer.
- Luminaire performance will be no less than applicable luminaire output Standards require.
Availability will be subject to regulated service levels.

The cost of any service levels higher than those set out above would be agreed and recovered separately.

The **CLER LED Tariff** applies where SA Power Networks maintains the Customer's luminaire on the Customer's infrastructure.

Under the CLER LED Tariff SA Power Networks will operate, maintain, and repair the luminaire during the term of the agreement.

- Operation includes
 - asset, outage and customer management systems and administration,
 - asset and maintenance performance reporting to the Customer, and
 - warranty management as required.
- Maintenance includes cleaning, testing and inspection at appropriate intervals.
- Repair includes replacement of luminaire components as relevant.
- The cost of maintaining or replacing any additional equipment or features above the standard specification, such as special visors or screens, would be agreed and recovered separately.
- Luminaire replacements required due to vandalism, third party damage, post warranty period comprehensive failure, or at the end of the asset's economic life, would be the responsibility of the Customer.
- Repair, maintenance and replacement of the Customer's non-luminaire public lighting infrastructure would be the responsibility of the Customer.
- Luminaire performance will be no less than applicable luminaire output Standards require. Availability will be subject to best endeavours to achieve regulated service levels.

The cost of any service levels higher than those set out above would be agreed and recovered separately.

7. FEEDER CHARGES

7.1 Background to these charges

Some large customers have negotiated with SA Power Networks for the use of existing SA Power Networks assets to supply more reliability or access to a better tariff. These customers are aware of these negotiated charges that are increased by CPI annually on 1 July. The prices exclude GST.

Notes accompanying the 2017/18 tariff schedules

1. Network tariffs are calculated on a GST exclusive basis. GST is added to the distribution tariffs.
2. SA Power Networks must assign each Distribution Network User to a distribution tariff in respect of each of its connection points in accordance with the following principles.

Assignment to cost-reflective (demand based) tariffs

- i. A Distribution Network User that connected to or altered the supply arrangements with the Distribution Network from 1 July 2010 and requiring more than 100 amps (70 kVA) supply must be assigned to a distribution network tariff that includes a demand component in respect of that connection point.
- ii. A Distribution Network User connected to the Distribution Network that has a maximum demand of 250 kVA or more in respect of a connection point, must be assigned to a distribution tariff that includes a demand component in respect of that connection point.
- iii. From 1 July 2015, a Distribution Network User connected to the Distribution Network that would qualify as a large customer (annual usage of 160 MWh or more) must be assigned to a distribution network tariff that includes a demand component in respect of that connection point. If the customer has a Type 6 meter, then a transition business single-rate or transition business 2-rate tariff must be used until a Type 1-5 meter is installed.
- iv. A new Distribution Network Business User connecting or an existing Distribution Network Business User altering the supply arrangements to the Distribution Network from 1 July 2015 and requiring multi-phase supply must be assigned to a distribution network tariff that includes a demand component in respect of that connection point. A Type 1-5 meter is required at such sites. Customers should note that where they choose to have a Type 1-4 meter, they have the right to exercise choice regarding their metering service provider. Installation of a Type 1-5 meter by itself is not an alteration to supply, but installation of an inverter, eg for solar PV Equipment or Battery Storage, is an alteration to supply.

General notes applicable to demand tariffs:

1. Agreed Demand charges for business customers are determined on the basis of the maximum half-hour trading interval for:
 - a. Agreed Maximum Demand (Annual Peak Demand) on workdays between 1200 and 2100 local time, during November to March only;
 - b. Agreed additional maximum demand (Additional Demand), as the difference between the customer's anytime maximum demand and the agreed (peak) maximum demand; and
 - c. For business customers on the Sports Ground demand kVA tariff, the Agreed Peak Demand shall be determined on work days between 1200 and 1900 local time, during December to February only. Additional Demand shall be determined using all other times of the year.

2. Actual Demand charges for business customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
 - a. Summer Peak Demand on work days between 1600 and 2100 local time, during November to March only;
 - b. Year-round Shoulder Demand on work days between 1200 and 1600 local time; and
 - c. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
3. Actual Demand charges for residential customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
 - a. Summer Peak Demand on all days between 1600 and 2100 local time during November to March only;
 - b. Winter Shoulder Demand on all days between 1600 and 2100 local time; and
 - c. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
4. Peak energy is energy consumed on business days between the hours of 0700 and 2100 CST. Type 6 meters typically measure this component during week days whereas Type 1-5 meters will measure this in on work days. For customers with Type 6 metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 CST.
5. Off-peak energy is energy consumed other than peak energy.

Residential tariff notes:

1. The low voltage residential single rate tariff is currently available to eligible residential customers taking supply at less than 1 kV. These customers ordinarily use a Type 1-6 National Electricity Market (**NEM**) compliant meter. The metered energy consumption is charged in two blocks. Block 1 is 0-4MWh pa, Block 2 is >4MWh pa.
2. The low voltage residential monthly actual demand tariff is available to eligible residential customers taking supply at less than 1 kV. These customers will require a Type 1-5 NEM compliant meter read at least monthly. The metered energy consumption is charged at a single rate. The maximum kW demand charge is based on the actual maximum demand measured over a half hour interval, on any day in the month between 16:00 and 21:00 hours local time. A higher price applies during the summer period (November to March) than the winter period (April to October). Currently, there is no charge for demand that is higher outside of the peak 16:00 and 21:00 local time, time period. The demand charge is applied on a ‘per day’ basis according to the days in the month.
3. Controlled load is an optional partner tariff component used to control permanently installed hot water services and other appliances (including electric vehicles and battery chargers up to 32A), during off peak times between 23:00-07:00 hours Central Standard Time (**CST**). Operation anywhere within this window is permitted based on the customer’s requirements but with a

randomised start time. Where multiple appliances are connected to a single phase of the OPCL circuit, eg hot water, EV batteries, battery storage and under-floor heating, only one appliance can operate at a time on that phase. A solar sponge version is also available between 10:00-15:00 hours CST.

Small business tariff notes:

1. The low voltage business two rate tariff has a TOU structure with peak and off-peak consumption charges. This tariff is the default tariff for new single phase customers. Peak charges (at a higher rate) apply work days 07:00-21:00 hours CST with all other times including non-work-days defined as off-peak (charged at a lower rate). Peak and off-peak is charged in single blocks. A Type 1-6 NEM compliant meter is required.
2. The small business monthly actual kVA demand transition tariff is mandatory for new multi-phase small business customers or existing small business customers who upgrade to a multi-phase supply and require a new meter. The usage portion has peak charges (at a higher rate) that apply work days 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (charged at a lower rate). The demand charge is based on the actual maximum kVA demand measured over a half hour interval, on any day in the month between 12:00 and 16:00 hours local time, work days, for the shoulder period (12 months). An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. Currently, there is no charge for demand that is higher outside of the peak 16:00 and 21:00 time period. The tariff is a combination of 50% business 2-rate and 50% small business actual demand. These customers require a Type 1-5 interval meter read at least monthly.
3. The small business actual kVA demand tariff is optional to small business customers taking supply at less than 1 kV. Metered energy consumption is charged at a single rate. Shoulder demand (12 months) applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours local time, for each month of the year. Peak demand prices also apply during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
4. Unmetered supply tariffs are applicable to supply points that are not metered. Unmetered tariffs comprise of an energy rate that is applied to the calculated electricity consumption using an agreed algorithm from the applicable Metrology Procedure. Unmetered supply tariffs are generally invoiced monthly.
5. The business single rate tariff is a closed tariff that was available for use before July 2010. The consumption is charged on a flat scale (previously inclining block until July 2016).
6. The low voltage agreed kVA demand tariff is a closed tariff that was available for use before July 2016. The peak demand is agreed, and measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on an inclining scale in two demand blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

7. Controlled load is a closed optional partner tariff component used to control permanently installed hot water services and other appliances, during off peak times between 23:00-07:00 hours CST. Operation anywhere within this window is permitted based on the customer's requirements but with a randomised start time. A solar sponge version is also available between and 10:00-15:00 hours CST.

Large LV business tariff notes:

1. The large LV business actual kVA demand tariff is the default tariff for large LV business customers. It has a fixed daily charge and a metered energy consumption charged at a single rate. Shoulder demand (12 months) applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours local time, for each month of the year. An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
2. The large LV business agreed kVA demand tariff is an opt-in tariff for large LV business customers. It has a fixed daily charge and a metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on a declining scale in two consumption blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
3. The sportsground agreed kVA demand tariff is a special purpose tariff for sportsgrounds with significant floodlighting. It has a fixed daily charge and a metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of December to February and is charged on a declining scale in two consumption blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
4. The back-up agreed kVA demand tariff is special purpose tariff. It has a fixed daily charge and metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on a flat scale. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
5. The single rate transitional tariff has a fixed daily charge. The metered energy consumption is charged on a flat scale. This tariff is only available to businesses with a Type 6 meter.
6. The two rate transitional tariff has a fixed daily charge and a TOU structure with peak and off-peak consumption charges. Peak charges (at a higher rate) apply on work days from 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (and charged at a lower rate).

Peak usage and off-peak is charged in single blocks. This tariff is only available to businesses with a Type 6 meter.

7. A controlled load partner tariff is a closed optional tariff component used to control permanently installed hot water services and other appliances, during off peak times between 23:00-07:00 hours CST. Operation anywhere within this window is permitted based on the customer's requirements but with a randomised start time. A solar sponge version is also available between and 10:00-15:00 hours CST.

High voltage business tariff notes:

1. The high voltage annual agreed kVA demand tariff is the default tariff for this tariff class. It consists of a single block of peak demand, a single usage price for energy and a significant fixed daily charge. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
2. The high voltage annual agreed kVA demand <400kVA tariff is available on an opt-in basis however the customer's maximum demand must not exceed 400 kVA. It consists of a single block of peak demand, a single usage price for energy and a fixed daily charge.

An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

3. The business monthly actual kVA demand tariff is an opt-in tariff. It has a metered energy consumption charged at a single rate. Shoulder demand applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours central local time every month of the year. An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
4. The back-up annual agreed kVA demand tariff is a special purpose tariff. It consists of a single block of peak demand and a single usage price for energy. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
5. The two rate tariff is closed to new customers. It has a fixed daily charge and a TOU structure with peak and off-peak consumption charges. Peak charges (at a higher rate) apply during work days from 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (charged at a lower rate). Peak and off-peak usage is charged in single blocks. This tariff is only available to businesses with a Type 6 meter.

Major business tariff notes:

1. The sub-transmission and zone substation kVA demand tariff is for business customers that take supply directly from the sub-transmission network or a zone substation but do not utilise locational transmission pricing (ie their demand is < 10 MW and their annual usage is below 40 GWh pa). It consists of a single block of peak demand and a single usage price for energy. The peak demand price applies during the peak period (November to March) between 12:00 and 21:00 hours local time, on workdays. An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. The minimum level of agreed demand (peak plus additional) for this tariff is 5,000 kVA. A Type 1-4 interval meter is required with the ability to measure both active and reactive power.
2. The locational sub-transmission and zone substation kVA demand tariff is for business customers that take supply directly from the sub-transition network or a zone substation and are subject to locational transmission pricing (ie their demand is > 10 MW and their annual usage is above 40 GWh pa). It consists of a fixed daily rate based on locational pricing, a single block of peak demand and a single usage price for energy. The peak demand price applies during the peak period (November to March) between 12:00 and 21:00 hours local time, on workdays. An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. The minimum level of agreed demand (peak plus additional) for this tariff is 5,000 kVA. A Type 1-4 interval meter is required with the ability to measure both active and reactive power.
3. The sub-transmission and zone substation kVA demand back-up tariff is a special purpose tariff for business customers that require additional security of supply. It consists of a single block of peak demand and a single usage price for energy. A Type 1-4 interval meter is required with the ability to measure both active and reactive power is required.
4. Sub-transmission and zone substation customers on locational tariffs have individually calculated charges.

General notes applicable to demand tariffs:

1. Agreed Demand charges for business customers are determined on the basis of the maximum half-hour trading interval for:
 - d. Agreed Maximum Demand (Annual Peak Demand) on workdays between 1200 and 2100 local time, during November to March only;
 - e. Agreed additional maximum demand (Additional Demand), as the difference between the customer's anytime maximum demand and the agreed (peak) maximum demand; and
 - f. For business customers on the Sports Ground demand kVA tariff, the Agreed Peak Demand shall be determined on work days between 1200 and 1900 local time, during December to February only. Additional Demand shall be determined using all other times of the year.
2. Actual Demand charges for business customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:

- d. Summer Peak Demand on work days between 1600 and 2100 local time, during November to March only;
 - e. Year-round Shoulder Demand on work days between 1200 and 1600 local time; and
 - f. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
3. Actual Demand charges for residential customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
- d. Summer Peak Demand on all days between 1600 and 2100 local time during November to March only;
 - e. Winter Shoulder Demand on all days between 1600 and 2100 local time; and
 - f. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
4. Peak energy is energy consumed on business days between the hours of 0700 and 2100 CST. Type 6 meters typically measure this component during week days whereas Type 1-5 meters will measure this in on work days. For customers with Type 6 metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 CST.
5. Off-peak energy is energy consumed other than peak energy.

Alternative control services tariff schedules

SA Power Networks annual metering charge (\$ nominal)

$\text{Price}^t =$ $\text{Price}^{t-1} \times (\text{CPI}^t/\text{CPI}^{t-1}) \times (1 - X^t)$		2017/18 \$pa	2017/18 \$/day
Type 1-4 'Exceptional' remotely read interval meter	Non-capital	178.50	0.4890
	Capital	251.87	0.6900
	Non-capital and capital	430.37	1.1791
Type 5-6 CT connected manually read meter	Non-capital	97.16	0.2662
	Capital	137.10	0.3756
	Non-capital and capital	234.26	0.6418
Type 5-6 WC manually read meter	Non-capital	11.87	0.0325
	Capital	16.74	0.0459
	Non-capital and capital	28.61	0.0784

SA Power Networks upfront metering charge (\$ nominal)

	2017/18 \$
Type 5 single element	199.82
Type 5 two element	287.03
Type 5 three phase	492.48
Type 6 single element	113.97
Type 6 two element	287.02
Type 6 three phase	338.73

General notes applicable to metering tariffs:

There are four different combinations of metering fees possible:

- Existing customers using SA Power Networks' meters. These customers continue to pay the capital and non-capital charges;
- Where an existing customer at June 2015 has the meter replaced by an alternate meter provider eg a type 4 meter, the customer will continue to pay the Capital-related charge, but will cease paying the non-capital related charge;
- Where a new customer connects to the network and elects to use an SA Power Networks meter, the customer incurs an upfront capital charge, and also incurs the annual non-capital charge. The customer is not liable for any ongoing capital charges; and
- Where an existing customer at June 2015 was not using an SA Power Networks meter but that of an alternate meter provider, eg a type 4 meter, the customer is not liable for any annual metering charges to SA Power Networks.

Capital charges continue to apply to customers using Type 5,6 WC and CT meters and to Type 1-4 Exceptional meters where customers elect to switch to another meter type and/or meter provider from 1 July 2015. Under the AER's Final Decision these charges continue to June 2020.

The Agreed Demand Tariffs have previously been specified in this tariff schedule as having the agreed kVA demand amount applied on a per month basis. These tariffs are applied on a per day basis, so the charge shown in this year's tariff schedule comprises the amount determined by allowing for 12 months and 365 days in the year, ie the daily amount will be 12 / 365 times the monthly amount.

Back-up Supply Tariffs

These tariffs are only available for sites with more than one National Market Meter Identifier where the second NMI is for a back up supply to the site on a stepped demand tariff. Typically, these sites are customers with greater than 4MVA demands and for critical infrastructure; eg Water assets, Hospitals, telecommunications sites or data centre's. These tariffs recognise that the primary NMI demand charges are contributing to the transmission costs for the site. The back up NMIs are charging for the demand at the Distribution Use of System charge and the energy component of the tariff is equal to the primary NMI tariff rates.

9. TARIFF MAPPING

Pricing Proposal 2017 /18

Tariff schedules

May 2017 (V2.1)

This page is intentionally left blank.

Standard control services tariff schedules

Following are the standard control services and negotiated services tariff schedules for 2017/18 and indicative tariff schedules for 2018/19 and 2019/20.

Note, the JSO and NUoS tariffs schedules have been revised and therefore differ to those initially published 31 March 2017.

SA Power Networks

Table 37: NUoS tariff schedule 2017/18

SA Power Networks' Tariffs 2017/18		Supply	Energy based usage					Annual agreed kVA demand			Monthly actual kVA demand			Monthly actual kW demand			
Final Network Prices Schedule comprises DUoS, PV FIT and TUOS excludes GST, Metering		NUoS	Supply Rate \$/day	Usage Block 1 \$/kWh	Usage Block 2 \$/kWh	Usage Peak \$/kWh	Usage Off-Peak \$/kWh	Controlled Load \$/kWh	Block 1 \$/kVA/day Annual	Block 2 \$/kVA/day Annual	Additional \$/kVA/day Annual	Summer Peak \$/kVA/day 5 months	Year Shoulder \$/kVA/day 12 months	Year Off-Peak \$/kVA/day 12 months	Summer Peak \$/kW/day 5 months	Winter Shoulder \$/kW/day 7 months	Year Off-Peak \$/kW/day 12 months

SA Power Networks

Notes accompanying the 2017/18 tariff schedules

1. Network tariffs are calculated on a GST exclusive basis. GST is added to the distribution tariffs.
2. SA Power Networks must assign each Distribution Network User to a distribution tariff in respect of each of its connection points in accordance with the following principles.

Assignment to cost-reflective (demand based) tariffs

- i. A Distribution Network User that connected to or altered the supply arrangements with the Distribution Network from 1 July 2010 and requiring more than 100 amps (70 kVA) supply must be assigned to a distribution network tariff that includes a demand component in respect of that connection point.
- ii. A Distribution Network User connected to the Distribution Network that has a maximum demand of 250 kVA or more in respect of a connection point, must be assigned to a distribution tariff that includes a demand component in respect of that connection point.
- iii. From 1 July 2015, a Distribution Network User connected to the Distribution Network that would qualify as a large customer (annual usage of 160 MWh or more) must be assigned to a distribution network tariff that includes a demand component in respect of that connection point. If the customer has a Type 6 meter, then a transition business single-rate or transition business 2-rate tariff must be used until a Type 1-5 meter is installed.
- iv. A new Distribution Network Business User connecting or an existing Distribution Network Business User altering the supply arrangements to the Distribution Network from 1 July 2015 and requiring multi-phase supply must be assigned to a distribution network tariff that includes a demand component in respect of that connection point. A Type 1-5 meter is required at such sites. Customers should note that where they choose to have a Type 1-4 meter, they have the right to exercise choice regarding their metering service provider. Installation of a Type 1-5 meter by itself is not an alteration to supply, but installation of an inverter, eg for solar PV Equipment or Battery Storage, is an alteration to supply.

General notes applicable to demand tariffs:

1. Agreed Demand charges for business customers are determined on the basis of the maximum half-hour trading interval for:
 - a. Agreed Maximum Demand (Annual Peak Demand) on workdays between 1200 and 2100 local time, during November to March only;
 - b. Agreed additional maximum demand (Additional Demand), as the difference between the customer's anytime maximum demand and the agreed (peak) maximum demand; and
 - c. For business customers on the Sports Ground demand kVA tariff, the Agreed Peak Demand shall be determined on work days between 1200 and 1900 local time, during December to February only. Additional Demand shall be determined using all other times of the year.

SA Power Networks

2. Actual Demand charges for business customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
 - a. Summer Peak Demand on work days between 1600 and 2100 local time, during November to March only;
 - b. Year-round Shoulder Demand on work days between 1200 and 1600 local time; and
 - c. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
3. Actual Demand charges for residential customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
 - a. Summer Peak Demand on all days between 1600 and 2100 local time during November to March only;
 - b. Winter Shoulder Demand on all days between 1600 and 2100 local time; and
 - c. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
4. Peak energy is energy consumed on business days between the hours of 0700 and 2100 CST. Type 6 meters typically measure this component during week days whereas Type 1-5 meters will measure this in on work days. For customers with Type 6 metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 CST.
5. Off-peak energy is energy consumed other than peak energy.

Residential tariff notes:

1. The low voltage residential single rate tariff is currently available to eligible residential customers taking supply at less than 1 kV. These customers ordinarily use a Type 1-6 National Electricity Market (**NEM**) compliant meter. The metered energy consumption is charged in two blocks. Block 1 is 0-4MWh pa, Block 2 is >4MWh pa.
2. The low voltage residential monthly actual demand tariff is available to eligible residential customers taking supply at less than 1 kV. These customers will require a Type 1-5 NEM compliant meter read at least monthly. The metered energy consumption is charged at a single rate. The maximum kW demand charge is based on the actual maximum demand measured over a half hour interval, on any day in the month between 16:00 and 21:00 hours local time. A higher price applies during the summer period (November to March) than the winter period (April to October). Currently, there is no charge for demand that is higher outside of the peak 16:00 and 21:00 local time, time period. The demand charge is applied on a 'per day' basis according to the days in the month.
3. Controlled load is an optional partner tariff component used to control permanently installed hot water services and other appliances (including electric vehicles and battery chargers up to

SA Power Networks

32A), during off peak times between 23:00-07:00 hours Central Standard Time (**CST**). Operation anywhere within this window is permitted based on the customer's requirements but with a randomised start time. Where multiple appliances are connected to a single phase of the OPCL circuit, eg hot water, EV batteries, battery storage and under-floor heating, only one appliance can operate at a time on that phase. A solar sponge version is also available between 10:00-15:00 hours CST.

Small business tariff notes:

1. The low voltage business two rate tariff has a TOU structure with peak and off-peak consumption charges. This tariff is the default tariff for new single phase customers. Peak charges (at a higher rate) apply work days 07:00-21:00 hours CST with all other times including non-work-days defined as off-peak (charged at a lower rate). Peak and off-peak is charged in single blocks. A Type 1-6 NEM compliant meter is required.
2. The small business monthly actual kVA demand transition tariff is mandatory for new multi-phase small business customers or existing small business customers who upgrade to a multi-phase supply and require a new meter. The usage portion has peak charges (at a higher rate) that apply work days 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (charged at a lower rate). The demand charge is based on the actual maximum kVA demand measured over a half hour interval, on any day in the month between 12:00 and 16:00 hours local time, work days, for the shoulder period (12 months). An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. Currently, there is no charge for demand that is higher outside of the peak 16:00 and 21:00 time period. The tariff is a combination of 50% business 2-rate and 50% small business actual demand. These customers require a Type 1-5 interval meter read at least monthly.
3. The small business actual kVA demand tariff is optional to small business customers taking supply at less than 1 kV. Metered energy consumption is charged at a single rate. Shoulder demand (12 months) applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours local time, for each month of the year. Peak demand prices also apply during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
4. Unmetered supply tariffs are applicable to supply points that are not metered. Unmetered tariffs comprise of an energy rate that is applied to the calculated electricity consumption using an agreed algorithm from the applicable Metrology Procedure. Unmetered supply tariffs are generally invoiced monthly.
5. The business single rate tariff is a closed tariff that was available for use before July 2010. The consumption is charged on a flat scale (previously inclining block until July 2016).
6. The low voltage agreed kVA demand tariff is a closed tariff that was available for use before July 2016. The peak demand is agreed, and measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on an inclining scale

SA Power Networks

in two demand blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

7. Controlled load is a closed optional partner tariff component used to control permanently installed hot water services and other appliances, during off peak times between 23:00-07:00 hours CST. Operation anywhere within this window is permitted based on the customer's requirements but with a randomised start time. A solar sponge version is also available between and 10:00-15:00 hours CST.

Large LV business tariff notes:

1. The large LV business actual kVA demand tariff is the default tariff for large LV business customers. It has a fixed daily charge and a metered energy consumption charged at a single rate. Shoulder demand (12 months) applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours local time, for each month of the year. An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
2. The large LV business agreed kVA demand tariff is an opt-in tariff for large LV business customers. It has a fixed daily charge and a metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on a declining scale in two consumption blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
3. The sportsground agreed kVA demand tariff is a special purpose tariff for sportsgrounds with significant floodlighting. It has a fixed daily charge and a metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of December to February and is charged on a declining scale in two consumption blocks. Block 1: 0-1000kVA, block 2: >1000kVA. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
4. The back-up agreed kVA demand tariff is special purpose tariff. It has a fixed daily charge and metered energy consumption charged at a single rate. The peak demand is measured on work days between 12:00 and 21:00 hours local time, during the summer months of November to March and is charged on a flat scale. Customers (through their retailer) can apply for agreed

SA Power Networks

demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

5. The single rate transitional tariff has a fixed daily charge. The metered energy consumption is charged on a flat scale. This tariff is only available to businesses with a Type 6 meter.
6. The two rate transitional tariff has a fixed daily charge and a TOU structure with peak and off-peak consumption charges. Peak charges (at a higher rate) apply on work days from 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (and charged at a lower rate). Peak usage and off-peak is charged in single blocks. This tariff is only available to businesses with a Type 6 meter.
7. A controlled load partner tariff is a closed optional tariff component used to control permanently installed hot water services and other appliances, during off peak times between 23:00-07:00 hours CST. Operation anywhere within this window is permitted based on the customer's requirements but with a randomised start time. A solar sponge version is also available between and 10:00-15:00 hours CST.

High voltage business tariff notes:

1. The high voltage annual agreed kVA demand tariff is the default tariff for this tariff class. It consists of a single block of peak demand, a single usage price for energy and a significant fixed daily charge. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.
2. The high voltage annual agreed kVA demand <400kVA tariff is available on an opt-in basis however the customer's maximum demand must not exceed 400 kVA. It consists of a single block of peak demand, a single usage price for energy and a fixed daily charge.

An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended. Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

3. The business monthly actual kVA demand tariff is an opt-in tariff. It has a metered energy consumption charged at a single rate. Shoulder demand applies to the monthly workday maximum kVA demand (measured over a half hour interval) between 12:00 and 16:00 hours central local time every month of the year. An additional peak demand price applies during the peak period (November to March) between 16:00 and 21:00 hours local time, on workdays. These customers will require a Type 1-5 interval meter read at least monthly.
4. The back-up annual agreed kVA demand tariff is a special purpose tariff. It consists of a single block of peak demand and a single usage price for energy. An additional demand applies where higher levels of demand are required during the year than are required during the peak demand period. Customers (through their retailer) can apply for agreed demand to be amended.

SA Power Networks

Reduction requests require supporting evidence. This tariff requires a Type 1-5 interval meter capable of measuring both active and reactive power.

5. The two rate tariff is closed to new customers. It has a fixed daily charge and a TOU structure with peak and off-peak consumption charges. Peak charges (at a higher rate) apply during work days from 07:00-21:00 hours local time, with all other times including non-work-days defined as off-peak (charged at a lower rate). Peak and off-peak usage is charged in single blocks. This tariff is only available to businesses with a Type 6 meter.

Major business tariff notes:

1. The sub-transmission and zone substation kVA demand tariff is for business customers that take supply directly from the sub-transmission network or a zone substation but do not utilise locational transmission pricing (ie their demand is < 10 MW and their annual usage is below 40 GWh pa). It consists of a single block of peak demand and a single usage price for energy. The peak demand price applies during the peak period (November to March) between 12:00 and 21:00 hours local time, on workdays. An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. The minimum level of agreed demand (peak plus additional) for this tariff is 5,000 kVA. A Type 1-4 interval meter is required with the ability to measure both active and reactive power.
2. The locational sub-transmission and zone substation kVA demand tariff is for business customers that take supply directly from the sub-transition network or a zone substation and are subject to locational transmission pricing (ie their demand is > 10 MW and their annual usage is above 40 GWh pa). It consists of a fixed daily rate based on locational pricing, a single block of peak demand and a single usage price for energy. The peak demand price applies during the peak period (November to March) between 12:00 and 21:00 hours local time, on workdays. An additional demand charge applies where higher levels of demand are required during the year than are required during the peak demand period. The minimum level of agreed demand (peak plus additional) for this tariff is 5,000 kVA. A Type 1-4 interval meter is required with the ability to measure both active and reactive power.
3. The sub-transmission and zone substation kVA demand back-up tariff is a special purpose tariff for business customers that require additional security of supply. It consists of a single block of peak demand and a single usage price for energy. A Type 1-4 interval meter is required with the ability to measure both active and reactive power is required.
4. Sub-transmission and zone substation customers on locational tariffs have individually calculated charges.

General notes applicable to demand tariffs:

1. Agreed Demand charges for business customers are determined on the basis of the maximum half-hour trading interval for:
 - d. Agreed Maximum Demand (Annual Peak Demand) on workdays between 1200 and 2100 local time, during November to March only;

SA Power Networks

- e. Agreed additional maximum demand (Additional Demand), as the difference between the customer's anytime maximum demand and the agreed (peak) maximum demand; and
 - f. For business customers on the Sports Ground demand kVA tariff, the Agreed Peak Demand shall be determined on work days between 1200 and 1900 local time, during December to February only. Additional Demand shall be determined using all other times of the year.
2. Actual Demand charges for business customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
- d. Summer Peak Demand on work days between 1600 and 2100 local time, during November to March only;
 - e. Year-round Shoulder Demand on work days between 1200 and 1600 local time; and
 - f. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
3. Actual Demand charges for residential customers are determined on the basis of the maximum half-hour trading interval since the last meter read (Type 1-4 meters are assumed to be read each calendar month) for:
- d. Summer Peak Demand on all days between 1600 and 2100 local time during November to March only;
 - e. Winter Shoulder Demand on all days between 1600 and 2100 local time; and
 - f. Off-peak Demand at all other times (the price is zero for actual off-peak demand).
4. Peak energy is energy consumed on business days between the hours of 0700 and 2100 CST. Type 6 meters typically measure this component during week days whereas Type 1-5 meters will measure this in on work days. For customers with Type 6 metering that does not recognise specific days, peak energy is energy consumed on each day between the hours of 0700 and 2100 CST.
5. Off-peak energy is energy consumed other than peak energy.

SA Power Networks

Alternative control services tariff schedules

Following are the alternative control services tariff schedules for 2017/18 and indicative tariff schedules for 2018/19 and 2019/20.

Table 52: SA Power Networks annual metering charge (\$ nominal)

Price ^t = Price ^{t-1} x (CPI ^t /CPI ^{t-1}) x (1 - X ^t)		2015/16 \$pa	2016/17 \$pa	2017/18 \$pa	2018/19 F'cast \$pa	2019/20 F'cast \$pa	2017/18 \$/day
Type 1-4 'Exceptional' 'remotely read interval meter'	Non-capital	135.07	185.16	178.50	173.82	\$169.25	0.4890
	Capital	176.18	215.83	251.87	296.89	349.96	0.6900
	Non-capital and capital	311.25	400.99	430.37	470.70	519.21	1.1791
Type 5-6 CT connected manually read meter	Non-capital	73.52	100.79	97.16	94.61	92.13	0.2662
	Capital	95.90	117.48	137.10	161.60	190.49	0.3756
	Non-capital and capital	169.42	218.27	234.26	256.21	282.62	0.6418

Type 6 three phase	304.19	331.81	338.73	349.80	361.67

SA Power Networks

General notes applicable to metering tariffs:

There are four different combinations of metering fees possible:

- Existing customers using SA Power Networks' meters. These customers continue to pay the capital and non-capital charges;
- Where an existing customer at June 2015 has the meter replaced by an alternate meter provider eg a type 4 meter, the customer will continue to pay the Capital-related charge, but will cease paying the non-capital related charge;
- Where a new customer connects to the network and elects to use an SA Power Networks meter, the customer incurs an upfront capital charge, and also incurs the annual non-capital charge. The customer is not liable for any ongoing capital charges; and
- Where an existing customer at June 2015 was not using an SA Power Networks meter but that of an alternate meter provider, eg a type 4 meter, the customer is not liable for any annual metering charges to SA Power Networks.

Capital charges continue to apply to customers using Type 5,6 WC and CT meters and to Type 1-4 Exceptional meters where customers elect to switch to another meter type and/or meter provider from 1 July 2015. Under the AER's Final Decision these charges continue to June 2020.

The Agreed Demand Tariffs have previously been specified in this tariff schedule as having the agreed kVA demand amount applied on a per month basis. These tariffs are applied on a per day basis, so the charge shown in this year's tariff schedule comprises the amount determined by allowing for 12 months and 365 days in the year, ie the daily amount will be 12 / 365 times the monthly amount.
